

**VARDHAMAN**  
COLLEGE OF ENGINEERING

**CURRICULUM**  
**For**  
**Bachelor of Technology**  
**Computer Science and Engineering (AI & ML)**

Under  
**Choice Based Credit System (CBCS)**

**B. Tech. - Regular Four-Year Degree Program**  
(For batches admitted from the Academic Year 2025 - 2026)

&

**B. Tech. - Lateral Entry Scheme**  
(For batches admitted from the Academic Year 2026 - 2027)

**August 2025**

**VARDHAMAN COLLEGE OF ENGINEERING**  
(Autonomous)

Affiliated to JNTUH, Approved by AICTE, Accredited by NAAC with A++ Grade  
Kacharam, Shamshabad, Hyderabad- 501 218, Telangana, India  
[www.vardhaman.org](http://www.vardhaman.org), [info@vardhaman.org](mailto:info@vardhaman.org)

## Department Vision

To be a premier center of excellence with research in artificial intelligence through unique interdisciplinary partnerships and positive contribution to the community, organizations and society as a whole.

## Department Mission

- M1:** To impart knowledge in cutting edge Artificial Intelligence technologies in par with industrial standards.
- M2:** To collaborate with industry to uplift innovative research and development in Artificial Intelligence and Machine Learning and its allied fields to serve the needs of society.
- M3:** To produce successful Computer Science and Engineering graduates with a specialization in AI/ML with personal and professional responsibilities and commitment to lifelong learning.

## Program Educational Objectives (PEOs)

- PEO1:** Graduates will have the ability to adapt, contribute and innovate new technologies and systems in the key domains of Artificial Intelligence and Machine Learning.
- PEO2:** Graduates will be able to successfully pursue higher education in reputed institutions with AI Specialization.
- PEO3:** Graduates will have the ability to explore research areas and produce outstanding contribution in various areas of Artificial Intelligence and Machine Learning.
- PEO4:** Graduates will be ethically and socially responsible solution providers and entrepreneurs in the field of Computer Science and Engineering with AI/ML Specialization.

## Knowledge and Attitude Profile (WK)

- WK1:** A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.
- WK2:** Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
- WK3:** A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.
- WK4:** Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.
- WK5:** Knowledge, including efficient resource use, environmental impacts, whole-life cost, reuse of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.
- WK6:** Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.
- WK7:** Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.
- WK8:** Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.
- WK9:** Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

## Program Outcomes (POs)

Engineering Graduates will be able to:

- PO1: Engineering Knowledge:** Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
- PO2: Problem Analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4).
- PO3: Design/ Development of Solutions:** Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5).
- PO4: Conduct investigations of complex problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
- PO5: Modern Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6).
- PO6: The Engineer and The World:** Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
- PO7: Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
- PO8: Individual and Collaborative Team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
- PO9: Communication:** Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.
- PO10: Project Management and Finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
- PO11: Life-Long Learning:** Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

## Program Specific Outcomes (PSOs)

- PSO1:** Apply the knowledge of Artificial Intelligence to design, develop, and evaluate computational solutions for complex problems in diverse domains, such as healthcare, finance, and automation.
- PSO2:** Demonstrate expertise in using advanced ML tools, techniques, and frameworks to develop innovative solutions for data analysis, pattern recognition, and intelligent decision-making systems.

## United Nations Sustainable Development Goals (SDGs)

- SDG1: No Poverty** – End poverty in all its forms everywhere.
- SDG2: Zero Hunger** – End hunger, achieve food security and improved nutrition and promote sustainable agriculture.
- SDG3: Good Health and Well-Being** – Ensure healthy lives and promote well-being for all at all ages.
- SDG4: Quality Education** – Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all.
- SDG5: Gender Equality** – Achieve gender equality and empower all women and girls.
- SDG6: Clean Water and Sanitation** – Ensure availability and sustainable management of water and sanitation for all.
- SDG7: Affordable and Clean Energy** – Ensure access to affordable, reliable, sustainable and modern energy for all.
- SDG8: Decent Work and Economic Growth** – Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.
- SDG9: Industry, Innovation and Infrastructure** – Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation.
- SDG10: Reduced Inequalities** – Reduce inequality within and among countries.
- SDG11: Sustainable Cities and Communities** – Make cities and human settlements inclusive, safe, resilient and sustainable.
- SDG12: Responsible Consumption and Production** – Ensure sustainable consumption and production patterns.
- SDG13: Climate Action** – Take urgent action to combat climate change and its impacts.
- SDG14: Life Below Water** – Conserve and sustainably use the oceans, seas and marine resources for sustainable development.
- SDG15: Life on Land** – Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.
- SDG16: Peace, Justice and Strong Institutions** – Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels.
- SDG17: Partnerships for the Goals** – Strengthen the means of implementation and revitalize the global partnership for sustainable development.

#### Course Description

##### Course Overview

This course provides mathematical knowledge required to analyze problems encountered in engineering. In this course, the students are acquainted with the solution of system of linear equations, eigen values and eigen vectors, functions of several variables, multiple integrals. The course is designed to build conceptual clarity and problem-solving skills, with emphasis on both theoretical understanding and practical applications.

##### Course Pre/Co-requisites

This course has no specific prerequisite and co-requisite.

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9001.1. Solve system of equations using rank of a matrix.
- A9001.2. Construct the canonical form of a quadratic form using orthogonal transformations.
- A9001.3. Express a function in series by mean value theorems and evaluate improper integrals using Beta and Gamma functions.
- A9001.4. Examine the extremum of a function of several variables.
- A9001.5. Apply multiple integrals to find the areas and volumes.

#### Course Syllabus

##### Unit-I:

**Matrices:** Rank of a matrix by Echelon form and Normal form, Inverse of Non- singular matrices by Gauss-Jordan method, System of linear equations: Solving system of Homogeneous and Non-Homogeneous equations by Gauss elimination method, Gauss Jacobi and Gauss Seidel Iteration Method.

##### Unit-II:

**Eigen Values and Eigen Vectors:** Linear Transformation and Orthogonal transformation: Eigenvalues, Eigenvectors and their properties, Diagonalization of a matrix, Cayley- Hamilton Theorem (without proof), finding inverse and power of a matrix by Cayley- Hamilton Theorem. Quadratic forms and Nature of the Quadratic Forms, Reduction of Quadratic form to canonical forms by Orthogonal Transformation.

##### Unit-III:

**Single Variable Calculus:** Limit and Continuous of functions and its properties. Mean value theorems: Rolle's theorem, Lagrange's Mean value theorem with their Geometrical Interpretation and applications, Cauchy's Mean value Theorem, Taylor's Series (All the theorems without proof), Definition of Improper Integral, Beta and Gamma functions and their applications.

**Unit-IV:**

**Multivariable Calculus (Partial Differentiation and applications):** Definitions of Limit and Continuity, Partial Differentiation: Euler's Theorem, Total derivative, Jacobian, Functional dependence & independence. Applications: Maxima and minima of functions of two variables and three variables using method of Lagrange multipliers.

**Unit-V:**

**Multivariable Calculus (Integration):** Evaluation of Double Integrals (Cartesian and polar coordinates), change of order of integration (only Cartesian form), Change of variables for double integrals (Cartesian to polar), Evaluation of Triple Integrals. Applications: Areas by double integrals and volumes by triple integrals.

**Books and Materials**

### A9007 – Engineering Physics

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

The Engineering Physics course introduces the fundamental principles of quantum mechanics, semiconductor physics, quantum computing, magnetic and dielectric materials, as well as lasers and fibre optics. Students will explore theoretical foundations, material properties, and device concepts alongside their practical applications in modern technologies such as electronics, communication, sensing, and computing systems. This course bridges core physics concepts with real-world innovations, preparing learners for advanced studies and research in emerging technologies.

##### Course Pre/Co-requisites

This course has no specific prerequisites and co requisites.

##### Relevant Sustainable Development Goals (SDGs)

SDG 7: Affordable and Clean Energy

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9007.1. Apply quantum mechanical principles to understand the particle behavior and formation of energy bands in solids.
- A9007.2. Analyze semiconductor properties and explain the operation of P-N junction diode and their applications.
- A9007.3. Apply quantum gates to design quantum circuits and implement fundamental quantum algorithms.
- A9007.4. Analyze magnetic and dielectric properties relevant to modern technological applications.
- A9007.5. Apply laser and fibre optic principles to communication and sensing technologies.

#### Course Syllabus

##### Unit-I:

**Quantum Mechanics:** Introduction, de-Broglie hypothesis, Heisenberg uncertainty principle, physical significance of wave function, postulates of quantum mechanics: operators in quantum mechanics, eigen values and eigen functions, Schrödinger's time independent wave equation, particle in a 1D box, Bloch's theorem (qualitative), Kronig-Penney model (qualitative): E-k diagram, effective mass of electron, formation of energy bands, origin of band gap, classification of solids, concept of discrete energy levels.

##### Unit-II:

**Semiconductor Physics:** Intrinsic semiconductors, density of states, Fermi-Dirac distribution function, carrier concentration in intrinsic semiconductors, direct and indirect band gap semiconductors, extrinsic semiconductors, characteristics of P-N junction diode, applications: Light Emitting Diode (LED), solar cell, Hall effect.

**Unit-III:**

**Quantum Computing:** Introduction, linear algebra for quantum computation, Dirac's Bra and Ket notation and their properties, Hilbert space, Bloch's sphere, concept of quantum computer, classical bits, Qubits, multiple Qubit system, quantum computing system for information processing, evolution of quantum systems, quantum measurements, entanglement, quantum gates (Hadamard, CNOT, Toffoli), challenges and advantages of quantum computing over classical computation, Introduction to quantum algorithms: Deutsch-Jozsa, Shor, Grover (Qualitative).

**Unit-IV:**

**Magnetic and Dielectric Properties:** Introduction to magnetic materials, origin of magnetic moment, classification of magnetic materials (dia, para, ferro), Weiss domain theory of ferromagnetism, hysteresis, soft and hard magnetic materials, applications: magnets for EV, Giant Magneto Resistance (GMR) device. Introduction to dielectric materials, types of polarization (qualitative): electronic, ionic & orientational; ferroelectric, piezoelectric, pyroelectric materials and their applications: Ferroelectric Random-Access Memory (Fe-RAM), load cell and fire sensor.

**Unit-V:**

**Lasers and Fibre Optics:** Introduction to laser, characteristics of laser, Einstein coefficients and their relations, metastable state, population inversion, pumping, lasing action, Ruby laser, He-Ne laser, semiconductor diode laser, applications: Bar code scanner, LIDAR for autonomous vehicle. Introduction to fibre optics, total internal reflection, construction of optical fibre, acceptance angle, numerical aperture, classification of optical fibres, losses in optical fibres, applications: optical fibre for communication system, sensor for structural health monitoring.

**Books and Materials**

## A9501 – Programming for Problem Solving

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

### Course Description

#### Course Overview

This course introduces the principles of problem-solving and programming through C language. It begins with the basics of algorithms, flowcharts, and structured program design, enabling students to develop logical thinking skills. Core programming concepts such as variables, operators, control statements, arrays, and strings are covered to build a strong foundation. The course further explores modular programming using functions and recursion, along with structures and unions for handling complex data. Advanced concepts like pointers and dynamic memory management are introduced to enhance program efficiency. File handling techniques are discussed for effective data storage and retrieval. Fundamental searching and sorting algorithms are included to improve problem-solving efficiency and performance analysis. By the end of the course, students will be able to design, implement, and evaluate C programs that solve real-world computational problems systematically and efficiently.

#### Course Pre/Co-requisites

This Course has no specific Pre/Co requisites

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9501.1. Use basic programming constructs and control statements to design solutions for computational problems.
- A9501.2. Develop programs using arrays and strings to store and manipulate sequential data.
- A9501.3. Implement modular programming using functions, structures, and unions to manage complex problems and data.
- A9501.4. Make use of pointers and file handling to effectively manage and process data.
- A9501.5. Choose appropriate searching and sorting technique to organize and retrieve data efficiently.

### Course Syllabus

#### Unit-I:

**Problem Solving Techniques:** Algorithms- Algorithmic approach, characteristics of algorithm and Examples, Flowcharts- Definition, Symbols and examples, Problem solving strategies: Top-down approach and Bottom-up approach.

**Introduction to C:** Structure of a C Program, Identifiers, Variables, Constants and Data Types. Operators and Expressions. Precedence of operators and Evaluation of Expressions, Type conversions, Formatted input and output. Control Statements: Conditional Statements- if, if else, nested if, else if ladder and switch statements. Iterative or Loop statements- while, do while and for statements. Jump statements- break, continue and goto statements.

**Unit-II:**

**Arrays and Strings:** Arrays: Introduction, One Dimensional Arrays - Declaration and initialization, Reading and Writing. Two Dimensional Arrays - Declaration and initialization, Reading and Writing. Manipulating elements of Arrays. Strings: Introduction, Declaration, and initialization, Reading and writing, string handling functions, handling two dimensional strings.

**Unit-III:**

**Functions, Structures and Unions:** Functions- Introduction, Function definition and Function call, Categories of functions, Recursion, Limitations of recursive functions, storage classes, Passing Arrays to functions, Common Pre-processor Directives. Structures- Definition, Declaration, and Initialization, accessing structure members, Array of Structures, Arrays within structures, Structures and functions, size of structures, Unions- Definition, Declaration, and Initialization, accessing Union member.

**Unit-IV:**

**Pointers and Files:** Pointers-Declaration, Initialization, Pointer to Pointer, Pointer Arithmetic, Parameter Passing Techniques, Pointer to Arrays, Pointers to Structures. Files- Introduction, defining, opening, and closing a File, Input / Output operations on Files, Random Access in files, Command line arguments.

**Unit-V:**

**Searching and Sorting:** Time and Space Complexity, Searching- Linear Search and Binary Search, Sorting- Bubble Sort, Selection Sort, Insertion Sort and Quick Sort.

**Books and Materials**

**Text Books:**

1. Thareja, Reema. *Programming in C*. AICTE ed., 2<sup>nd</sup> rev. ed., Oxford University Press, 2018.
2. Forouzan, Behrouz A., and Richard F. Gilberg. *Computer Science: A Structured Programming Approach Using C*, 3<sup>rd</sup> ed., reprint, Cengage Learning (formerly Course Technology), 2007.

### A9204 – Basic Electrical Engineering

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
30	0	0	30	60	2	40	60	100

#### Course Description

##### Course Overview

Basic Electrical Engineering course serves as a theoretical foundation aimed at enriching students' understanding of electric circuits, DC and AC machines, while fostering analytical abilities. This course delves into the foundational concepts and methodologies integral to Electrical Engineering, covering various aspects such as electrical circuits, network theorems, and operational principles of key components including DC machines (motors and generators), Transformers, Induction motors, and Synchronous generators.

##### Course Pre/Co-requisites

This course has no specific pre requisites or co-requisites.

##### Relevant Sustainable Development Goals (SDGs)

SDG 7: Affordable and Clean Energy

SDG 9: Industry, Innovation, and Infrastructure

SDG 11: Sustainable Cities and Communities

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9204.1. Apply network reduction techniques and theorems to solve DC circuits.
- A9204.2. Apply AC circuit concepts to solve and analyze single-phase series R, L, and C circuits
- A9204.3. Apply the principles of transformer to determine EMF, efficiency, and performance under no-load and load conditions.
- A9204.4. Apply the concepts of DC machines to determine their performance under different operating conditions.
- A9204.5. Apply AC machine principles to determine the characteristics and behavior of three phase induction and synchronous machines.

#### Course Syllabus

##### Unit-I:

**DC Circuits:** Electrical circuit elements (R, L and C), Ohm's Law, KVL and KCL, Types of sources, Source transformation, Network reduction techniques (Series and Parallel), Mesh and Nodal analysis, Superposition theorem, Thevenin's and Norton's theorems(DC Excitation only) - Numerical problems.

##### Unit-II:

**AC Circuits:** Representation of sinusoidal waveforms, Average & RMS value, Peak factor, Form factor, j-notation, Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series circuits only) - Numerical problems.

##### Unit-III:

**Single Phase Transformers:** Working principle and constructional details, Types-Core and Shell type transformers, EMF equation, Transformer operation on NO load and ON load Conditions, OC and SC tests on Transformer, Losses and Efficiency - Numerical problems on EMF equation.

**Unit-IV:**

**DC Machines:** D.C. Generators - Construction, Principle of operation, E.M.F. equation, Methods of excitation - Separately excited and Self-excited generators- Numerical problems on EMF equation. D.C Motors - Principle of operation, Concept of Back E.M.F., Torque equation, Load test on DC Shunt motor - Conceptual description only.

**Unit-V:**

**AC Machines:** Generation of rotating magnetic fields, Construction and working of a three-phase Induction motor, Concept of slip, Torque production- Starting and Running torques, Torque-Slip characteristics - Numerical problems on slip. Construction of Synchronous generator-Salient pole and Non-salient pole generators, working principle of synchronous generator, No-Load Characteristics - Conceptual description only.

**Books and Materials**

**Text Books: Text Books:**

1. Hayt, William H., Jack E. Kemmerly, and Steven M. Durbin. *Engineering Circuit Analysis*. 9th ed., McGraw-Hill Higher Education, 2007.
2. Theraja, B. L., and A. K. Theraja. *A Textbook of Electrical Technology*. Vols. 1-2, S. Chand Publishers, New Delhi.

**Reference Books:**

2. Kulshreshtha, D. C. *Basic Electrical Engineering*. McGraw-Hill, 2009.
3. Bobrow, L. S. *Fundamentals of Electrical Engineering*. Oxford University Press, 2011.

### A9801 – Foundations of Data Science

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This Course introduces students to the fundamental principles, concepts, and techniques that form the basis of data science. It begins with an overview of data science, big data, datafication, and statistical inference, laying the groundwork for understanding real-world data challenges. Students explore different types of data and attributes, along with methods for describing and classifying them. The course covers essential statistical measures and visualization techniques for summarizing data, fostering analytical thinking. Through hands-on learning, students gain practical experience in using vectors, matrices, arrays, and data frames for data manipulation. The course concludes with data visualization techniques and an introduction to linear and multiple regression analysis, enabling students to derive meaningful insights from data. This foundational course equips learners with the analytical and computational skills necessary to advance in the field of data science.

##### Course Pre/Co-requisites

This course has no specific pre-requisites and co-requisites

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

##### Course Outcomes

After the completion of the course, the student will be able to:

- A9801.1. Explain the fundamental concepts of data science, including datafication, statistical inference, and modeling approaches.
- A9801.2. Differentiate and classify various data types and attributes used in data analytics and describe their measurement scales.
- A9801.3. Compute and interpret basic statistical measures such as central tendency, dispersion, and graphical summaries for given datasets.
- A9801.4. Demonstrate the use of vectors, matrices, arrays, factors, and data frames for data manipulation and transformation.
- A9801.5. Create and interpret various charts and perform linear and multiple linear regression analyses for data-driven insights.

##### Course Syllabus

###### Unit-I:

**Introduction:** Definition of Data Science- Big Data and Data Science hype – and getting past the hype - Datafication - Current landscape of perspectives - Statistical Inference - Populations and samples - Statistical modeling, probability distributions, fitting a model – Over fitting.

###### Unit-II:

**Data Types:** Types of Data: Attributes and Measurement, Attribute, The Type of an Attribute, The Different

Types of Attributes, Describing Attributes by the Number of Values, Asymmetric Attributes, Binary Attribute, Nominal Attributes, Ordinal Attributes, Numeric Attributes, Discrete versus Continuous Attributes.

**Unit-III:**

**Statistical Description:** Basic Statistical Descriptions of Data: Measuring the Central Tendency: Mean, Median, and Mode, Measuring the Dispersion of Data: Range, Quartiles, Variance, Standard Deviation, and Interquartile Range, Graphic Displays of Basic Statistical Descriptions of Data.

**Unit-IV:**

**Vectors:** Creating and Naming Vectors, Vector Arithmetic, Vector sub setting Matrices: Creating and Naming Matrices, Matrix Sub setting, Arrays, Class. Factors and Data Frames: Introduction to Factors: Factor Levels, Summarizing a Factor, Ordered Factors, Comparing Ordered Factors, Introduction to Data Frame, subsetting of Data Frames, Extending Data Frames, Sorting Data Frames.

**Unit-V:**

**Charts and Graphs:** Introduction, Pie Chart: Chart Legend, Bar Chart, Box Plot, Histogram, Line Graph: Multiple Lines in Line Graph, Scatter Plot. Regression: Linear Regression Analysis, Multiple Linear regression

**Books and Materials**

**Text Books:**

1. O'Neil, Cathy, and Rachel Schutt *Doing Data Science: Straight Talk from the Frontline* , O'Reilly Media, 2014.
2. Srinivas, K. G., and G. M. Siddesh. *Statistical Programming in R* , Oxford University Press, 2014.

**Reference Books:**

2. Tan, Pang-Ning, Michael Steinbach, and Vipin Kumar. *Introduction to Data Mining* , Pearson Education, 2006.

### A9008 – Engineering Physics Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

The Engineering Physics laboratory course provides hands-on experience with fundamental concepts in semi-conductors, magnetism, optics, and wave phenomena. Students will conduct practical experiments including the I-V characteristics of LEDs and solar cells, Hall effect measurements, and determination of energy band gaps. The course also covers the analysis of magnetic and dielectric properties, measurement of laser wavelength, characterization of optical fibre parameters, and AC frequency determination using a sonometer. These experiments are designed to enhance conceptual understanding and develop experimental skills relevant to modern physics and engineering applications.

##### Course Pre/Co-requisites

This course has no specific pre-requisites and co-requisites.

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 7: Affordable and Clean Energy

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9008.1. Determine key parameters of LEDs and solar cells from their I–V characteristics.
- A9008.2. Apply the Hall Effect to determine the type of semiconductor and estimate the density of majority charge carriers.
- A9008.3. Evaluate material properties including energy band gap, magnetic moment, dielectric constant, and magnetic hysteresis behavior.
- A9008.4. Apply the principles of lasers and optical fibres to determine laser wavelength and Numerical Aperture.
- A9008.5. Apply principles of mechanical waves to determine AC supply frequency.

#### Course Syllabus

##### List of Experiments:

1. Determination of threshold voltage of LED from its I-V characteristics.
2. Study the I-V characteristics of Solar cell and find the fill factor.
3. Verification of the type of semiconductor material by estimating the density of majority carriers using the Hall Effect.
4. Determination of the energy band gap of a given semiconductor.
5. Determine the Magnetic moment of a given magnet and Horizontal component of earth's magnetic field.
6. Study of B-H curve of a ferromagnetic material.
7. Determination of dielectric constant of a given material.
8. Determination of the wavelength of a laser source using a plane transmission grating.

9. Evaluation of the numerical aperture (NA) and acceptance angle of a given optical fibre.
10. Determination of the frequency of an AC supply using a sonometer.

**Laboratory Equipment/Software/Tools Required:**

1. Light Emitting Diode Kit
2. Solar Cell Kit
3. Hall Effect Setup
4. Energy Gap of a Semiconductor Kit
5. Magnetic Moment Setup
6. B-H Curve Kit
7. Dielectric Constant Setup
8. Semiconductor Diode Laser
9. Plane Diffraction Grating
10. Optical Fibre Trainer Kit
11. Sonometer Setup
12. Meters – Ammeter, Voltmeter, Digital Multimeter, Deflecting Magnetometer, Thermometers

**Books and Materials**

**Text Books:**

1. Jain, Sushil Kumar, and Manjeet Singh *Applied Physics Experiments*, JBC Press, 2013.

**Reference Books:**

1. Mal, S. B., and Er. Ashish Jesuja *Practical Physics for Engineering Students of B.Tech*, JBC Press, 2020.

## A9502 – Programming for Problem Solving Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

This course aims to build practical programming skills using the C language. Students learn to approach problems logically and implement solutions efficiently. Emphasis is given to writing clear and structured programs using control statements and modular design. They gain hands on experience with data handling, including arrays, strings, and user-defined data types. Pointers are introduced to manage memory and work with complex data efficiently. File operations are covered to handle data storage and retrieval. Students practice implementing algorithms for sorting, searching, and numerical computations. The course develops debugging and problem-solving abilities through practical exercises. Focus is placed on optimizing code for better performance and readability. By the end, learners can design and implement robust C programs for a variety of computational problems.

#### Course Pre/Co-requisites

This course has no specific pre-requisites and co-requisites.

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9502.1. Make use of fundamental programming constructs to develop solutions for computational problems.
- A9502.2. Perform various operations on arrays and strings to effectively organize, process, and manipulate sequential data in programs.
- A9502.3. Develop programs with functions and structures to design modular programs that efficiently handle and process data.
- A9502.4. Apply pointers and file handling techniques to implement programs for storing and managing data effectively.
- A9502.5. Implement searching and sorting algorithms to efficiently organize and access data.

### Course Syllabus

#### List of Experiments:

1. Variables and Expressions
  - a. Write a C program for Swapping of two numbers using a third variable.
  - b. Write a C program for the simple and compound interest.
  - c. Write a C program to evaluate the expressions (Finding  $y = m \cdot x + c$ , displacement).
2. Conditional Statements–I
  - a. Write a C program for finding the max and min from the three numbers.
  - b. Write a C program to check the given year is leap year or not.

c. Write a C program to find the roots of a quadratic equation.

### 3. Conditional Statements–II

- Write a C program to check the given number is power of 2 or not using bitwise operators.
- Write a C program to read 3 subject marks. Calculate and display the grade of a student based on the percentages.
- Write a C program to perform Arithmetic Operations using switch statement.

### 4. Iterative Statements–I

- Write a C program to find sum of  $n$  natural numbers  $(1 + 2 + 3 + \dots + n)$ .
- Write a C program to find factorial of a given number.
- Write a C program to print Fibonacci numbers.
- Write a C program to find reverse of the given number.
- Write a C program to check if the binary representation of a positive number is palindrome or not. (Examples: 101, 11, 11011, 1001001 are palindromes. 100, 110, 1011 are not).

### 5. Iterative Statements–II

- Write a C program to read a password until it is correct. For wrong password print “Incorrect password” and for correct password print “Correct password” and quit the program. (The correct password is 1234).
- Write a C program to check the given number is prime or not.
- Write a C program to find the GCD of given two numbers.
- Write a C program to print the output in various triangle patterns using nested for loops.
- Write a C program to find the sum of the series Geometric Progression.

### 6. Arrays

- Write a C program to find the largest and smallest number among a list of integers.
- Write a C program to read an array of  $n$  elements and find the mean, variance, and standard deviation.
- Write a C program to find addition of two matrices.
- Write a C program to find multiplication of two matrices.

### 7. Strings

- Write a C program to demonstrate the string handling functions.
- Write a C program to check whether a given string is palindrome or not.
- Write a C program to concatenate three strings.
- Write a C program to count the lines, words and characters in a given text.
- Write a C program that displays the position of a character  $ch$  in the string  $S$  or  $-1$  if  $S$  doesn't contain  $ch$ .

### 8. Functions

- Write a C program to find the factorial of a given number using non-recursive and recursive function.
- Write a C program to find the  $n$ th term of a Fibonacci series using recursive function.
- Write a C program to compute  $x^y$ .

### 9. Structures

- Write a C program to create a Student structure containing name, rollNo and grade as structure members. Display the name, rollNo and grade of a student.

- b. Write a C program to create a Student structure containing name, rollNo and grade as structure members. Display the name, rollNo and grade of  $n$  students by using array of structures concept.
10. Structures and functions
- Write a C program to add two complex numbers by passing structure to a function.
  - Write a C program to add two distances (in inch-feet system) using structures.
11. Pointers
- Write a C program to swap two integers using the following methods:
    - Call by Value
    - Call by Reference
  - Write a C program to demonstrate pointer arithmetic.
  - Write a program to display values in reverse order from an array using a pointer.
  - Write a program through a pointer variable to find sum of  $n$  elements from an array.
  - Write a C program to check the given string is palindrome or not using pointer.
  - Write a C program to print  $n$  city names using pointers and strings.
12. Files
- Write a C program to merge two files into a third file.
  - Write a C program to reverse the contents of a file.
  - Write a C program to use random access functions in files.
  - Write a C program to count the number of times a character occurs in a text file (file name and character are supplied as command line arguments).
13. Searching
- Write a C program that uses a non-recursive function to search for a key value in a list of integers using linear search.
  - Write a C program that uses a non-recursive function to search for a key value in a sorted list of integers using binary search.
14. Sorting
- Write a C program that implements the Bubble sort method to sort a given list of integers in ascending order.
  - Write a C program that sorts the given array of integers using selection sort in descending order.
  - Write a C program that sorts the given array of integers using quick sort in ascending order.
  - Write a C program that sorts the given array of integers using insertion sort in ascending order.
15. Miscellaneous
- Write a program that shows the binary equivalent of a given positive number between 0 to 255.
  - Write a C program to calculate the following, where  $x$  is a fractional value:

$$1 - \frac{x}{2} + \frac{x^2}{4} - \frac{x^3}{6}$$

- Write a C program to read in two numbers,  $x$  and  $n$ , and then compute the sum of this geometric progression:

$$1 + x + x^2 + x^3 + \dots + x^n$$

For example: if  $n = 3$  and  $x = 5$ , the program computes  $1 + 5 + 25 + 125$ .

4. Write a C program to convert a Roman numeral ranging from I to L to its decimal equivalent.
5. Write a C program that converts a number ranging from 1 to 50 to its Roman equivalent.
6. Write a C program that uses functions to perform the following operations:
  - i. To insert a sub-string into a given main string from a given position.
  - ii. To delete  $n$  characters from a given position in a given string.
7. Write a C program to merge two files into a third file (i.e., the contents of the first file followed by those of the second are put in the third file).
8. Write a program for display values reverse order from an array using a pointer.
9. Write a program through a pointer variable to sum of  $n$  elements from an array.
10. Write a C program that sorts the given array of integers using insertion sort in ascending order

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. GCC Compiler (Open source/ Freeware)

### A9205 – Basic Electrical Engineering Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

The Basic Electrical Engineering Laboratory provides students with practical hands-on experience to deepen their understanding of electric circuits, DC and AC machines, and to foster the development of analytical skills. This course delves into the fundamental concepts and methodologies underpinning Electrical Engineering, covering various aspects such as electrical circuits, network theorems, and the principles and operating conditions of DC machines (motors and generators), Transformers, Induction motors, and Alternators. Through practical applications and experimentation, students engage in active learning to solidify their comprehension and proficiency in the field of Electrical Engineering.

##### Course Pre/Co-requisites

This course has no specific pre requisites or co-requisites.

##### Relevant Sustainable Development Goals (SDGs)

SDG 7: Affordable and Clean Energy

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9205.1. Analyze and demonstrate the application of Ohm’s Law and Kirchoff’s Laws in DC and AC circuits.
- A9205.2. Demonstrate practical application and evaluation skills by analyzing and verifying Superposition, Thevenin’s and Norton’s theorems in provided circuits.
- A9205.3. Determine and verify impedance, voltage, and current in series RL and RC circuits using AC circuit concepts.
- A9205.4. Analyze and interpret the torque-speed and performance characteristics of DC motors to evaluate their operational efficiency.
- A9205.5. Analyze the open-circuit, short-circuit, and performance test results of transformers and AC machines to assess their key parameters and operational characteristics.

#### Course Syllabus

##### List of Experiments:

1. Verification of Ohm’s Law.
2. Verification of KVL and KCL.
3. Verification of Super position theorem.
4. Verification of Thevenin’s theorem.
5. Verification of Norton’s theorem.
6. Calculations and Verification of Impedance, Voltage and Current of series RL and series RC circuits.
7. OC and SC Tests on Single Phase Transformer.
8. Measurement of transformation ratio of Single Phase Transformer.

9. Torque-Speed Characteristics of a DC Shunt Motor.
10. Torque-Speed Characteristics of 3-phase Induction Motor.
11. Performance Characteristics of a Separately Excited DC Motor.
12. No-Load Characteristics of a Three-phase Alternator.

**Laboratory Equipment/Software/Tools Required:**

1. Bread Boards, Resistors of different values, Regulated Power Supply.
2. 1-Phase Transformer, DC Machines, 3-phase Induction Motor, Alternator.
3. Voltmeter, Ammeter, Tachometer, Rheostats and Watt meters (LPF and UPF).

**Books and Materials**

**Text Books:**

1. Hayt, William H., Jack E. Kemmerly, and Steven M. Durbin. *Engineering Circuit Analysis*. 9th ed., McGraw-Hill Higher Education, 2007.
2. Theraja, B. L., and A. K. Theraja. *A Textbook of Electrical Technology*. Vols. 1–2, S. Chand Publishers, New Delhi.

**Reference Books:**

1. Kothari, D. P., and I. J. Nagrath. *Basic Electrical Engineering*. 3rd ed., Tata McGraw-Hill, 2010.
2. Kulshreshtha, D. C. *Basic Electrical Engineering*. McGraw-Hill, 2009.
3. Bobrow, L. S. *Fundamentals of Electrical Engineering*. Oxford University Press, 2011.

### A9302 – Engineering Workshop

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

The Engineering Workshop course is designed to introduce students to basic and advanced manufacturing processes, workshop trades, and hands-on practical skills essential for engineering practice. The course provides experiential learning on a variety of trade skills including fitting, carpentry, welding, foundry, plumbing, electrical house wiring, and fabrication techniques such as 3D Printing. Students will gain practical familiarity with common tools, machines, and manufacturing methods, along with safety and quality management practices.

##### Course Pre/Co-requisites

This course has no specific pre-requisites and co-requisites.

##### Relevant Sustainable Development Goals (SDG(s))

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

SDG 12: Responsible Consumption and Production

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9302.1. Demonstrate the ability to perform fundamental workshop trades, including fitting, carpentry, welding, and plumbing, by completing a variety of hands-on tasks.
- A9302.2. Demonstrate safe and effective usage of fabrication tools and digital equipment.
- A9302.3. Identify and operate common workshop machines and tools while strictly adhering to safety protocols and quality management practices.
- A9302.4. Recognize the properties of different materials and select appropriate tools and processes for specific manufacturing applications.
- A9302.5. Fabricate a complete, functional assembly by integrating multiple skills learned across different workshop trades.

#### Course Syllabus

##### Part - A (Practical )

1. Fitting: L - Fit / V - Fit / Square - Fit / Semi Circular - Fit.
2. Carpentry: Lap Joint/ T- Bridle Joint / Mortise & Tenon Joint.
3. House wiring: Series / Parallel / One Bulb by One Switch / Tube Light / One Bulb by Two way Switch.
4. Welding: Butt Joint / Lap Joint / T Joint.
5. Foundry: Single Piece Pattern/ Split Piece Pattern / Multi Piece Pattern.
6. Tin Smithy: Open Scoop / Funnel / Rectangular Tray / Cylindrical.
7. Plumbing: Pipe Threading / Pipe Joints.
8. 3D Printing: Prepare a 3D Printing Model.

**Part - B (Demonstration)**

1. CNC Machining & Power Tools.
2. Casting & Plastic Moulding.
3. Welding (TIG/MIG, Gas Welding), Brazing.
4. Blacksmithy.

**Laboratory Equipment/Software/Tools Required:**

1. Fitting: Bench vise, Hacksaw frame, Calipers, Files, Try Square.
2. Carpentry: Carpentry vise, Chisels, Saws, Wooden Hammer, Try Square.
3. House Wiring: Voltage Tester, Wire Cutter, Wire Stripper, Cutting Plier, Nose Plier, Wire Gauge.
4. Welding: Welding M/c, Safeguards, Chipping Hammer, Electrode Holder.
5. Foundry: Wooden patterns, Riddle, Riser, Runner, Gate cutter, Rammers.
6. Tin Smithy: Wire Gauge, Snips, Pliers, Steel rule, Soldering kit, Spot Welding, Nylon Hammers.
7. Plumbing: Pipe Wrench, Pipe Cutter, Pliers, Pipe Die Set.
8. 3D Printing, 3D Modeling & Slicer Software.
9. Furnace, tongs, Swage Block.
10. Additional: Model Joints, Craft Knives and Electric Boards.

**Books and Materials**

**Text Books:**

1. Hajra Choudhury, S.K., and Nirjhar Rao. *Elements of Workshop Technology [Vol. 1, Manufacturing Processes]*, Revised and Enlarged 7<sup>th</sup> ed., Media Promoters & Publishers, 2023.

## A9021 - Community Centered Design Thinking

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL			H	C	CIE
L	T	P	SL					
0	0	0	45	45	1	40	60	100

### Course Description

#### Course Overview

The "Community-Centered Design Thinking" course aims to enable students to identify and address unique needs and challenges within local communities. Through the application of design thinking principles, students will develop creative problem-solving mindsets and the ability to collaborate effectively in multidisciplinary teams. The course emphasizes integrating moral code, professional standards, and sustainability principles into design solutions.

#### Course Pre/Co-requisites

This course has no specific prerequisite and co-requisite.

#### Relevant Sustainable Development Goals (SDGs)

SDG 3: Good Health and Well-being

SDG 4: Quality Education

SDG 11: Sustainable Cities and Communities

SDG 17: Partnerships for the Goals

### Course Outcomes

After the completion of the course, the student will be able to:

- A9021.1. Apply the principles of design thinking, empathy, and sustainability to identify and understand real-world community challenges.
- A9021.2. Conduct field research surveys and observation to define community-based problem statements.
- A9021.3. Ideate creative solutions using appropriate tools and techniques to meet the identified community needs.
- A9021.4. Collaborate with community members, NGOs, and peers to test, refine, and validate design solutions through feedback and co-design processes.
- A9021.5. Communicate design outcomes effectively through documentation, storytelling, and ethical reflection considering accessibility, inclusivity, and life-cycle impact.

### Course Syllabus

#### Unit-I:

**Community-Centered Design Thinking:** Understanding the significance of community-centered approaches, Overview of Design Thinking principles for community engagement.

#### Unit-II:

**Needs and Challenges Assessment:** Techniques for identifying and analyzing unique needs within local communities, SDGs Alignment, Case studies illustrating successful community-centered design projects.

#### Unit-III:

**Research and Comparative Analysis for Innovation:** Investigating existing solutions to community challenges, comparing their effectiveness, and identifying opportunities to create improved, innovative approaches.

**Unit-IV:**

**Ethical Design and Sustainability:** Integrating moral code and professional standards into the design process. Incorporating sustainability principles in design to define socially responsible solutions.

**Unit-V:**

**Refine Problem Statement:** study existing solutions, and generate creative, community-focused ideas, with all findings documented for the next stage of development.

**Activity Plan**

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
1	Unit-I: CCDT	Understand significance of community centered approaches	Concept Briefing + Discussion	Icebreaker: list visible community challenges	Reflection notes: "Why is community engagement critical?"	CO1
2	Unit-I: CCDT	Learn design thinking principles	Concept Briefing + Activity	Mini design thinking cycle for sample issue	Mind-map of 5 stages applied to local issue	CO1
3	Unit-II: Needs Assessment	Acquire techniques for identifying needs	Concept Briefing + Hands on Session	Practice mock interviews, empathy mapping	Conduct mini survey (3-5 people)	CO2
4	Unit-II: Needs Assessment	Connect needs to SDGs	Concept Briefing + Case Study	Group analysis: link issues to SDGs	Case study report (2-3 pages)	CO2
5	Unit-III: Research	Investigate existing solutions	Guided Research	Group research on 2-3 existing interventions	Summary table of solutions	CO3
6	Unit-III: Comparative Analysis	Compare effectiveness of solutions	Presentations	Present comparison of solutions (pros/cons)	Comparative chart submission	CO3
7	Unit-IV: Ethics	Integrate ethics into design	Debate	Debate: "Should cost outweigh ethics?"	Short essay on ethical dilemma	CO4
8	Unit-IV: Sustainability	Apply sustainability principles	Hands on Session	Create sustainability checklist for ideas	Submit checklist + reflection	CO4
9	Unit-V: Refinement	Refine problem statements	Guided Group Work	Rewrite into "How Might We..." questions	Final problem statement submission	CO2, CO5

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
10	Unit-V: Refinement	Study existing solutions deeply	Problem Statement Review	Critique and identify gaps in solutions	Gap Analysis Report	CO3, CO5
11	Unit-V: Ideation	Generate creative ideas	Ideation Hands-on Session	Brainstorming, SCAMPER, Story boarding	Sketches/story boards of top 3 ideas	CO3, CO5
12	Unit-V: Documentation & Presentation	Present and document findings	Final Showcase	Group presentations + reflection sharing	Final report + individual reflection essay	CO5

### Books and Materials

#### Text Books:

1. Pavan Soni. *Design Your Thinking*, Penguin Random House India, New Delhi, 2020.
2. Anuja Agarwal. *Design Thinking: A Framework for Applying Design Thinking in Problem Solving*, Cengage India, 2024.

#### Reference Books:

## A9002 – Ordinary Differential Equations and Vector Calculus

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	15	0	60	120	4	40	60	100

### Course Description

#### Course Overview

This course provides the fundamental mathematical concepts and techniques essential for engineering applications. In this course, the students are acquainted with ordinary differential equations of first and higher order and Laplace transforms, vector calculus. The course is designed to build conceptual clarity and problem-solving skills, with emphasis on both theoretical understanding and practical applications.

#### Course Pre/Co-requisites

This course has no specific prerequisite and co-requisite.

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9002.1. Make use of first order differential equations to solve real world problems.
- A9002.2. Solve ordinary differential equations of higher order.
- A9002.3. Apply Laplace transforms to solve ordinary differential equations.
- A9002.4. Determine divergence and curl of a vector point function.
- A9002.5. Compute line, surface, and volume integrals and convert them into one another using appropriate theorems.

#### Course Syllabus

##### Unit-I:

**First Order Ordinary Differential Equations:** Exact differential equations, Equations reducible to exact differential equations, linear and Bernoulli's equations, Orthogonal Trajectories (only in Cartesian Coordinates). Applications: Newton's law of cooling, Law of natural growth and decay.

##### Unit-II:

**Ordinary Differential Equations of Higher Order:** Higher order linear differential equations with constant coefficients: Non-homogeneous terms of the type  $e^{ax}$ ,  $\sin ax$ ,  $\cos ax$ , polynomials in  $x$ ,  $e^{ax}V(x)$  and  $xV(x)$ , method of variation of parameters.

##### Unit-III:

**Laplace Transforms:** Laplace Transform of standard functions, First shifting theorem, Laplace transforms of functions multiplied by 't' and divided by 't', Laplace transforms of derivatives and integrals of function, Evaluation of integrals by Laplace transforms, Laplace transform of periodic functions, Inverse Laplace transform by different methods, convolution theorem (without proof). Applications: solving Initial value problems by Laplace Transform method.

**Unit-IV:**

**Vector Differentiation:** Vector point functions and scalar point functions, Gradient, Directional derivatives, Divergence and Curl, Vector Identities, Scalar potential functions, Solenoidal and Irrotational vectors.

**Unit-V:**

**Vector Integration:** Line integral, Surface integral and Volume Integral. Theorems of Green, Gauss and Stokes (without proofs) and their applications.

**Books and Materials**

**Text Books:**

1. Grewal, B. S. *Higher Engineering Mathematics*, 43<sup>rd</sup> ed., Khanna Publications, 2015.
2. Jain, R. K., Iyengar, S. R. K. *Advanced Engineering Mathematics*, 5<sup>th</sup> ed., Narosa Publishing House, 2016.

**Reference Books:**

2. Greenberg Michael D. *Advanced Engineering Mathematics*, 2<sup>nd</sup> ed., Upper Saddle River, N.J. Prentice Hall, 1998.
3. Kreyszig, E. *Advanced Engineering Mathematics*, 9<sup>th</sup> ed., John Wiley & Sons, 2006.
4. Ramana, B. V. *Higher Engineering Mathematics*, 32<sup>nd</sup> edition reprint, McGraw Hill Education (India), 2018.

### A9009 – Engineering Chemistry

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course emphasizes the application of chemical principles to analyse and address engineering problems, including water and its treatment for diverse purposes, the study of engineering materials such as plastics, fibres, elastomers, and composites, as well as non-conventional energy sources, batteries, and fuel cells. The course aims to integrate theoretical knowledge with practical applications, preparing students to evaluate and implement chemical solutions in engineering contexts.

##### Course Pre/Co-requisites

This course has no specific prerequisites and co requisites.

##### Relevant Sustainable Development Goals (SDGs)

SDG 6: Clean Water and Sanitation

SDG 12: Responsible Consumption and Production

SDG 13: Climate Action

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9009.1. Analyse the hardness and other impurities present in the water for industrial and domestic applications.
- A9009.2. Apply electrochemical principles to protect the metals from corrosion.
- A9009.3. Illustrate the types of energy sources along with their characteristics and applications.
- A9009.4. Differentiate the properties of various polymeric materials based on their structure and engineering applications.
- A9009.5. Compare the materials to study various physical and chemical properties.

#### Course Syllabus

##### Unit-I:

**Water and its treatment:** Introduction – hardness of water – causes of hardness – types of hardness: temporary and permanent – expression and units of hardness, numerical problems. Steps involved in the treatment of potable water - disinfection of potable water by chlorination and break-point chlorination. Boiler troubles: sludges, scales and caustic embrittlement. Internal treatment of boiler feed water – Calgon conditioning – Phosphate conditioning – Colloidal conditioning – softening of water by ion exchange processes. Desalination of water – Reverse osmosis.

##### Unit-II:

**Electrochemistry and Corrosion:** Introduction- Electrode potential, standard electrode potential, Nernst equation (no derivation), electrochemical cell - Galvanic cell, cell representation, EMF of cell - numerical problems. Types of electrodes, reference electrodes - primary reference electrode - standard Hydrogen Electrode (SHE), Secondary reference electrode - Calomel electrode. Construction, working and determination of pH of an unknown solution using SHE and Calomel electrode.

**Corrosion:** Introduction- definition, causes and effects of corrosion – theories of corrosion, chemical and electro-chemical theories of corrosion, Types of corrosion: galvanic, water-line and pitting corrosion. Factors affecting rate of corrosion - nature of the metal, nature of the corroding environment. Corrosion control methods - electroplating, electroless plating and metal cladding.

#### Unit-III:

##### Energy Sources:

**Batteries:** Introduction – Classification of batteries - Primary, secondary and reserve batteries with examples. Construction, working and applications of Lead acid battery and Lithium ion battery. Fuel Cells – differences between a battery and a fuel cell, construction and applications of Hydrogen-Oxygen fuel cell.

**Fuels:** Introduction and characteristics of a good fuel, Calorific value – Units - HCV, LCV- Dulong's formula - Numerical problems. *Fossil fuels:* Introduction, Classification, Petroleum - Refining of Crude oil, Cracking - Types of cracking - Moving bed catalytic cracking. LPG and CNG composition and use. *Synthetic Fuels:* Fischer-Tropsch process, Introduction and applications of Hythane and Green Hydrogen.

#### Unit-IV:

**Polymeric Materials:** Terminology, types of polymerization – addition and condensation polymerization with examples. Plastics: Thermoplastic resins & Thermosetting resins. Preparation, properties and engineering applications of Polyvinyl chloride and Teflon. Fibers: Preparation, properties and engineering applications of Nylon-6,6 and Dacron. Elastomers: Natural rubber and its vulcanization, artificial rubbers - Buna-S and Butyl rubber. Conducting Polymers: classification, mechanism of conduction in trans - polyacetylene – applications. Biodegradable polymers: Polylactic acid and its applications.

#### Unit-V:

##### Advanced Functional Materials:

**Graphene:** Isolation, Structure and strength, applications in Computer, Electrical and Electronic Devices.

**Smart materials:** Introduction, Classification with examples - Shape Memory Alloys – Nitinol, Piezoelectric materials – quartz and their engineering applications. Biosensor - Definition, Amperometric Glucose monitor sensor.

**Portland cement:** Chemical constituents, Setting and Hardening and applications of cement.

### Books and Materials

#### Text Books:

1. Rama Devi, B., Aparna, P., and Prasanta Rath. *Engineering Chemistry*. 2<sup>nd</sup> ed., Cengage Publications, 2025.
2. Jain, Jain. *Engineering Chemistry*. 16<sup>th</sup> ed., Dhanpat Rai Publication Company, 2015.

5. Leo, Donald J. *Engineering Analysis of Smart Material Systems*. John Wiley & Sons, 2007.
6. *E-book:* "Engineering Chemistry by Shashi Chawla." Internet Archive, <https://archive.org/details/EngineeringChemistryByShashiChawla/page/n11/mode/2up>.

### A9011 – English for Skill Enhancement

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
30	0	0	30	60	2	40	60	100

#### Course Description

##### Course Overview

This course has been designed to develop linguistic and communicative competencies among engineering students. The Reading and Writing skills of the students are honed during the sessions using the prescribed textbook. Additionally, students are trained on effective usage of grammar and vocabulary. Further, they are encouraged to read texts which are aimed at developing their comprehension skills.

##### Course Pre/Co-requisites

This course has no specific prerequisite and co-requisite.

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 17: Partnerships for the Goals

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9011.1. Identify and use appropriate vocabulary to compose and deliver clear oral and written communication
- A9011.2. Practice adept usage of grammar for effective communication
- A9011.3. Interpret and summarize known and unknown passages
- A9011.4. Develop proficiency in writing for academic purposes
- A9011.5. Demonstrate basic proficiency in professional correspondence

#### Course Syllabus

##### Unit-I:

**Theme:** Perspectives

**Text:** Lesson on ‘The Generation Gap’ by Benjamin M. Spock

**Vocabulary:** Word Formation - Prefixes and Suffixes; Synonyms and Antonyms

**Grammar:** Identifying Common Errors in Writing with reference to Articles and Prepositions, Conjunctions

**Reading:** Reading and its importance - Sub skills of Reading – Skimming and Scanning

**Writing:** Sentence Structures - Use of Phrases and Clauses in Sentences - Types of Sentences; Punctuation; Techniques for Writing precisely – Paragraph Writing – Types, Structures and Features of a Paragraph – Creating Coherence - Organizing Principles of Paragraphs in Documents

##### Unit-II:

**Theme:** Digital Transformation

**Text:** Lesson on ‘Emerging Technologies’

**Vocabulary:** Homophones, Homonyms and Homographs

**Grammar:** Identifying Common Errors in Writing with reference to Tenses, Noun-Pronoun Agreement and Subject-Verb Agreement

**Reading:** Reading Strategies - Guessing Meaning from Context – Identifying Main Ideas - Exercises for Practice

**Writing:** Essay writing.

**Unit-III:**

**Theme:** Attitude and Gratitude

**Text:** Poems on ‘Leisure’ by William Henry Davies and ‘Be Thankful’ – Unknown Author

**Vocabulary:** Words often Confused; Phrasal Verbs

**Grammar:** Misplaced Modifiers

**Reading:** Sub-Skills of Reading – Identifying Topic Sentence and Providing Supporting Ideas - Exercises for Practice

**Writing:** Letter Writing: Letter of Request, Letter of Inquiry, Letter of Apology, Letter of Complaint, Email writing - Format, Style and Etiquette.

**Unit-IV:**

**Theme:** Entrepreneurship

**Text:** Lesson on ‘Why a Start-up Needs to Find its Customers First’ by Pranav Jain

**Vocabulary:** Standard Abbreviations in English, Idioms

**Grammar:** Redundancies in Oral and Written Communication, Transformation of sentences - Active and Passive Voice

**Reading:** Prompt Engineering Techniques – Comprehending and Generating Appropriate Prompts - Exercises for Practice

**Writing:** Precis Writing; Writing a Letter of Application and Resume/CV.

**Unit-V:**

**Theme:** Integrity and Professionalism

**Text:** Lesson on ‘Professional Ethics’

**Vocabulary:** Technical Vocabulary and its Usage, Collocations

**Grammar:** Transformation of sentences - Reported Speech, Common Errors covering all other aspects of grammar

**Reading:** Survey, Question, Read, Recite and Review (SQ3R Method) – Inferring the Meaning and Evaluating a Text - Exercises for Practice

**Writing:** Technical Reports - Introduction – Characteristics of a Report - Structure of Report (Manuscript Format)

**Books and Materials**

**Text Books:**

1. Board of Editors, *English for the Young in the Digital World*. Orient Black Swan Pvt. Ltd. 2025.

**Reference Books:**

1. Swan, Michael, *Practical English Usage*. Oxford University Press. New Edition, 2016.

### A9503 – Data Structures

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course introduces C++ programming with a focus on designing and implementing data structures. It covers object-oriented concepts such as classes, encapsulation, and abstraction for modular programming. Students learn to use pointers and dynamic memory for efficient data management. Templates and the Standard Template Library (STL) are taught for generic and reusable code. Linked lists are explored for dynamic data storage and sequential operations. Stacks and queues are implemented for practical applications like expression evaluation and task management. Tree structures are studied to represent hierarchical data with traversal and search methods. Binary search trees and AVL trees are covered to ensure organized and balanced data storage. Graph concepts and algorithms are introduced to model and navigate complex relationships. Hashing and dictionary structures provide fast data retrieval and efficient storage solutions. The course emphasizes hands-on programming to reinforce theoretical concepts. By the end, students can design, implement, and analyze core data structures effectively in C++.

##### Course Pre/Co-requisites

A9501 – Programming for Problem Solving

A9502 – Programming for Problem Solving Laboratory

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9503.1. Make use of programming constructs, Templates and STL components to implement data structures and solve computational problems effectively.
- A9503.2. Implement linked list data structures using abstract data types to perform various operations.
- A9503.3. Implement stack and queue abstract data types for solving applications on linear data.
- A9503.4. Choose an appropriate nonlinear data structure for representing and solving real world problems.
- A9503.5. Examine hashing and dictionary structures for insertion, deletion, and searching in computational problems.

#### Course Syllabus

##### Unit-I:

**Introduction to C++ and Data Structures:** Structure of a C++ Program, Classes and objects, Dynamic memory allocation (new and delete), Constructors and destructors, Access specifiers (public, private), Encapsulation and abstraction, Pointers and references, Functions, Inline functions, and function overloading. Template Definition, Function Templates, class Templates, Generic Function, Template function Overloading. Standard Template Library (STL) Overview- Containers: vector, list, map, set. Iterators and algorithms, Using STL templates in practical applications.

**Unit-II:**

**Linked Lists:** Classification of Data Structures, Abstract Data Types, Introduction to Linked Lists, Applications of Linked Lists, Node Structure and Memory Allocation. Linked List ADT, Singly Linked List Operations-Insert, Delete, Search and Traverse. Doubly Linked List Operations – Insert, Delete, Search and Traverse and Circular Linked Lists.

**Unit-III:**

**Stacks and Queues:** Stack ADT – Concepts and Applications. Array and Linked List implementation of Stacks. Applications – Conversion of Expression from infix to postfix, Evaluation of Postfix Expression. Queue ADT – Concepts & Applications. Array and Linked List implementation of Linear Queues, Array Implementation of Circular Queue and Double Ended Queue.

**Unit-IV:**

**Trees and Graphs:** Tree ADT, Binary Tree Terminology and Properties, Binary Tree Traversals – Inorder, Preorder and Postorder. Binary Search Tree Operations – Insertion, Deletion and Searching. AVL Trees, Definition, Height of an AVL Tree, Operations – Insertion, Deletion and Searching. Graph Definitions and Terminology. Graph Representations – Adjacency Matrix and Adjacency List. Graph Traversals – Depth-First Search (DFS) and Breadth-First Search (BFS).

**Unit-V:**

**Dictionaries and Hashing:** Hash Table Representation: hash functions, collision resolution-separate chaining, open addressing, linear probing, quadratic probing, double hashing, rehashing, extendible hashing. Dictionaries-linear list representation, skip list representation, operations - insertion, deletion and searching.

**Books and Materials**

**Text Books:**

1. Horowitz, Ellis, Sartaj Sahni, and Dinesh Mehta. *Fundamentals of Data Structures in C++*, 2<sup>nd</sup> ed., Universities Press, 2019.
2. Horowitz, *Data Structures Using C++*, 3<sup>rd</sup> edition, Course Technology, 2010.

**Reference Books:**

1. Drozdek, Adam. *Data Structures and Algorithms in C++*, 5<sup>th</sup> ed., Cengage Learning, 2025.
2. Dale, Nell, Chip Weems, and Tim Richards. *C++ Plus Data Structures*, 6<sup>th</sup> ed., Jones & Bartlett Learning, 2018.

### A9402 – Digital Electronics

#### Course Description

##### Course Overview

This course provides a foundational understanding of digital systems and logic design, essential for modern electronic and computing applications. It covers number systems, Boolean algebra, and logic gates, progressing into the design and analysis of combinational and sequential circuits. Emphasis is placed on logic simplification using Karnaugh Maps, as well as the implementation of logic functions using NAND and NOR gates. The course also introduces memory elements such as RAM and ROM, and provides exposure to Programmable Logic Devices, enabling custom logic design.

##### Course Pre/Co-requisites

This course has no specific prerequisites and co-requisites

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

SDG 11: Sustainable Cities and Communities

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9402.1. Apply Boolean algebra and minimization techniques to simplify a Boolean function.
- A9402.2. Construct combinational logic circuits using logic gates to implement specified Boolean functions.
- A9402.3. Analyze the behavior of latches and flip-flops for designing sequential logic.
- A9402.4. Develop synchronous sequential circuits using flip-flops and combinational logic.
- A9402.5. Implement digital systems using Programmable Logic Devices for flexible and efficient circuit design.

#### Course Syllabus

##### Unit-I:

**Number Systems:** Binary, Octal, Decimal, Hexadecimal, Complements of Numbers: 1's and 2's Complement.

**Boolean Algebra and Logic Gates:** Introduction, basic definitions, axiomatic definition of Boolean algebra, basic theorems and properties of Boolean algebra, Boolean functions, canonical and standard forms (SOP, POS), Digital logic gates, NAND-NOR realization.

##### Unit-II:

**Gate-Level Minimization Techniques:** Introduction, The Map method (Karnaugh Map) - 2, 3, and 4 variable K-map, Sum-of-Products and Product-of-Sums Simplification, Don't care conditions.

##### Unit-III:

**Combinational Logic:** Introduction, combinational circuits, analysis of combinational circuits, design procedure, binary adder-subtractor, magnitude comparator, decoders, encoders, multiplexers.

**Unit-IV:**

**Sequential Logic:** Introduction, sequential circuits, storage elements – latches and flip-flops, flip-flop conversions (JK to SR, JK to D, D to T), Design of counters - Synchronous and asynchronous counters, Shift registers – register with parallel load and serial-in serial-out shift register.

**Unit-V:**

**Memory and Programmable Logic Devices:** Random Access Memory (RAM), Read-Only Memory (ROM), Programmable ROM (PROM), Programmable Logic Array (PLA), Programmable Array Logic (PAL).

**Books and Materials**

**Text Books:**

1. Mano, M. Morris, and Michael D. Ciletti. Digital Design with an Introduction to the Verilog HDL. 6<sup>th</sup> ed., Pearson Education/PHI, 2017.

**Reference Books:**

1. Tocci, Ronald J., Neal S. Widmer, and Gregory L. Moss. Digital Systems: Principles and Applications. 10<sup>th</sup> ed., Pearson Education International, 2009.
2. Roth, Charles H., Jr., and Larry L. Kinney. Fundamentals of Logic Design. 6<sup>th</sup> ed., Cengage Learning, 2009.

## A9010 – Engineering Chemistry Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

The Engineering Chemistry Laboratory equips students with practical skills essential for understanding the chemical principles behind engineering materials and processes. It bridges theoretical knowledge with real-world applications, fostering analytical thinking and precision. Students learn to handle instruments, analyze data, and interpret results relevant to industrial and environmental contexts. The course emphasizes the role of chemistry in addressing engineering challenges and societal needs. Overall, it builds a strong foundation for innovation and responsible technological development.

#### Course Pre/Co-requisites

This course has no specific prerequisites and co requisites.

#### Relevant Sustainable Development Goals (SDGs)

SDG 6: Clean Water and Sanitation

SDG 12: Responsible Consumption and Production

SDG 13: Climate Action

### Course Outcomes

After the completion of the course, the student will be able to:

- A9010.1. Apply the instrumental techniques to find out the strength of solutions.
- A9010.2. Analyze the impurities present in the water using volumetric analysis.
- A9010.3. Make use of different titrimetric methods to measure chemical species.
- A9010.4. Analyze the importance of temperature and pressure on physical properties of liquids.
- A9010.5. Calculate the yield of synthesized compounds by maintaining appropriate reaction conditions.

### Course Syllabus

#### List of Experiments:

1. Estimation of amount of ferrous ion in the given solution by permanganometry.
2. Estimation of hardness of water by complexometry using EDTA.
3. Estimation of amount of hydrochloric acid in the given solution by conductometry.
4. Estimation of amount of strong and weak acid in the given solution by conductometry.
5. Estimation of amount of hydrochloric acid in the given solution by potentiometry.
6. Estimation of amount of ferrous ion in the given solution using potassium permanganate by potentiometry.
7. Estimation of manganese ion in the given solution by colorimetry.
8. Estimation of Copper ion in the given solution by colorimetry.
9. Determination of viscosity of the given liquid by Ostwald's viscometer.
10. Determination of surface tension of the given liquid by using stalagmometer.

11. Preparation of Bakelite.
12. Preparation of Nylon 6,6.

**Laboratory Equipment/Software/Tools Required:**

1. Digital Conductometer
2. Digital Potentiometer
3. Digital Colorimeter
4. Electrical Water Heater
5. Wall Mount Distillation Plant
6. Analytical/Digital Weighing Balance
7. Ostwald's Viscometer
8. Stalagmometer
9. Stopwatch
10. Thermometer
11. RB Flask condenser
12. Magnetic Stirrer
13. Pipette
14. Burette
15. Beaker

**Books and Materials**

**Text Books:**

1. Rama Devi, B., Aparna, P., and Prasanta Rath. *Engineering Chemistry*. 2<sup>nd</sup> ed., Cengage Publications, 2025.

**Reference Books:**

1. Vogel, A. I. *Inorganic Quantitative Analysis*. ELBS Publications.
2. Ahluwalia, V. K. *College Practical Chemistry*. Narosa Publications Ltd., 2007

## A9012 – English Language and Communication Skills Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

This course is designed to cater to the needs of students in developing their oral communication skills. It begins with an introduction to Phonetics to make them understand the received pronunciation and to help them speak with a neutral accent. This course incorporates listening skills and draws exercises of listening comprehension from various general and business contexts. The speaking exercises in this course will help the students to present their ideas in different situations, besides helping them to develop team spirit by participating in pair/group activities.

#### Course Pre/Co-requisites

This course has no specific prerequisite and co-requisite.

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 17: Partnerships for the Goals

### Course Outcomes

After the completion of the course, the student will be able to:

- A9012.1. Acquire the received pronunciation and speak in a neutral accent
- A9012.2. Use language effectively in real-life situations
- A9012.3. Demonstrate effective use of non verbal communication
- A9012.4. Interpret visual data for oral communication
- A9012.5. Develop the ability to enhance listening skills

### Course Syllabus

#### List of Experiments:

##### 1. CALL Lab:

**Instruction:** Speech Sounds - Listening Skills - Listening vs. Hearing - Importance – Purpose - Types

**Practice:** Listening to Distinguish Speech Sounds (Minimal Pairs) - Testing Exercises

##### 2. ICS Lab:

**Diagnostic Test:** Activity titled ‘Express Your View’

**Instruction:** Spoken and Written language - Formal and Informal English - Greetings – Introducing Oneself and Others

**Practice:** Any Ice-Breaking Activity

##### 3. CALL Lab

**Instruction:** Barriers to Listening - Active Listening

**Practice:** Listening for General Information - Multiple Choice Questions - Listening Comprehension - Exercises for practice

**4. ICS Lab:**

**Instruction:** Features of Good Conversation – Strategies for Effective Communication

**Practice:** Role Play Activity - Situational Dialogues – Expressions used in Various Situations – Making Requests and Seeking Permissions – Taking Leave - Telephone Etiquette

**5. CALL Lab**

**Instruction:** Minimizing Errors in Pronunciation (MTI)

**Practice:** Differences between British and American Pronunciation – Listening Comprehension – Exercises for practice

**6. ICS Lab:**

**Instruction:** Describing Objects, Situations, Places, People and Events

**Practice:** Picture Description Activity – Looking at a Picture and Describing Objects, Situations, Places, People and Events

**7. CALL Lab:**

**Instruction:** Techniques for Effective Listening

**Practice:** Listening for Specific Details - Listening - Gap Fill Exercises - Listening Comprehension – Exercises for practice

**8. ICS Lab:**

**Instruction:** Information transfer - oral interpretation of graphical data

**Practice:** Activity on oral interpretation of graphical data

**9. CALL Lab:**

**Instruction:** Identifying the literal and implied meaning

**Practice:** Listening for Evaluation - Write the Summary – Listening Comprehension – Exercises for practice

**10. ICS Lab:**

**Instruction:** Understanding Non-Verbal Communication

**Practice:** Dumb Charades Activity

**Post-Assessment Test:** 'Express Your View'

**Laboratory Equipment/Software/Tools Required:**

1. Computers with internet
2. K VAN Solutions Software
3. Headphones
4. Audio Visual Equipment
5. Camcorder

## Books and Materials

### Lab Manual:

1. Laboratory Handbook on English Language and Communication Skills Lab.

### Reference Books:

### A9504 – Data Structures Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

This course enables to design and implement efficient C++ programs. Students learn object-oriented concepts such as classes, objects, and dynamic memory. It covers data structures including arrays, linked lists, stacks, queues, trees, and graphs. Hands-on exercises emphasize insertion, deletion, traversal, and searching operations. Students explore algorithms to improve performance and optimize data handling. Practical work with STL containers, iterators, and templates is included. Hashing and dictionary implementations demonstrate efficient data retrieval techniques. The course develops analytical thinking and systematic problem-solving skills. Students gain experience in building reliable, maintainable, and scalable software. By the end, students can apply programming concepts to solve real-world computational problems.

##### Course Pre/Co-requisites

A9501 – Programming for Problem Solving

A9502 – Programming for Problem Solving Laboratory

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9504.1. Implement programs that efficiently manage and manipulate data using dynamic programming techniques in C++.
- A9504.2. Apply various linked list techniques to perform insertion, deletion and traversal on given data.
- A9504.3. Develop programs using linear data structures stack and queue to handle data processing tasks efficiently.
- A9504.4. Implement nonlinear data structures to solve real time applications.
- A9504.5. Choose appropriate hashing and dictionary methods to efficiently store, retrieve, and manipulate data.

#### Course Syllabus

##### List of Experiments:

1. Implementing Classes, Objects, and Dynamic Memory Allocation
  - a. Define a Student class with attributes: rollNumber, name, marks
  - b. Implement a constructor to initialize objects and a destructor to display a message when an object is deleted
  - c. Dynamically allocate an array of Student objects using new
  - d. Input details of n students and display them
  - e. Release allocated memory using delete

2. Function Overloading and Templates
  - a. Implement two overloaded functions `add()` that can add: Two integers, Two floating-point numbers
  - b. Define a function template `swapValues()` that swaps two variables of any type.
  - c. Test `swapValues()` with integer, float, and string types
3. Using STL Containers and Iterators
  - a. Create a vector of integers, insert elements, and display them using an iterator
  - b. Create a list of strings, perform insertion and deletion, and traverse using an iterator
  - c. Use a map to store StudentID -> Name pairs and display all elements
  - d. Use a set to store unique integers and print them in sorted order
  - e. Apply STL algorithms like `sort()`, `find()`, and `count()` on the containers
4. Implementing Singly Linked List (ADT) Operations
  - a. Define a Node structure containing data and a next pointer Implement functions to:
  - b. Insert a node at the beginning, end, and at a given position
  - c. Delete a node from the beginning, end, and a specified position..
  - d. Traverse the linked list and display all elements
  - e. Search for an element in the list and return its position.
  - f. Demonstrate all operations with sample inputs
5. Implementing Doubly Linked List (ADT) Operations
  - a. Define a DoublyNode structure containing data, prev, and next pointers. Implement functions to:
  - b. Insert a node at the beginning, end, and any position
  - c. Delete a node from the beginning, end, and a specified position
  - d. Traverse the list forward and backward
  - e. Search for an element in the list.
  - f. Demonstrate all operations with sample inputs
6. Circular Linked Lists (ADT) Operations
  - a. Define a Node structure for circular singly linked lists with a next pointer pointing to the first node. Implement functions to:
  - b. Insert a node at the beginning and end
  - c. Delete a node from the beginning and end
  - d. Traverse the list starting from any node and print all elements.
  - e. Extend the above to circular doubly linked lists with prev and next pointers
  - f. Demonstrate operations with sample inputs.
7. Implementing Stack (ADT) Using Array and Linked Lists Implement the following operations:
  - a. `push()` – insert an element onto the stack
  - b. `pop()` – remove the top element from the stack
  - c. `peek()` – view the top element without removing it
  - d. `isEmpty()` and `isFull()` – check stack status
8. Expression Conversion and Evaluation Using Stack
  - a. Implement infix to postfix conversion using a stack
  - b. Implement evaluation of postfix expressions using a stack
  - c. Test with different arithmetic expressions (including parentheses)

9. Implementing Queues (ADT) Using Array and Linked Lists Implement a linear queue using:
  - a. Array with enqueue() and dequeue() operations
  - b. Linked list dynamically allocating nodes for each element
  - c. Display or traverse list using array and linked list
10. Implementing Queues (ADT) Using Circular Linear List Implement a linear queue using:
  - a. Array with enqueue() and dequeue() operations.
  - b. Display or traverse list using array.
11. Binary Tree (ADT) Implementation and Traversals
  - a. Define a Node structure with data, left, and right pointers. Implement functions to:
  - b. Insert nodes into a binary tree
  - c. Traverse the tree using:
    - d. Inorder Traversal
    - e. Preorder Traversal
    - f. Postorder Traversal
  - g. Demonstrate traversal operations with a sample binary tree
12. Binary Search Tree (BST) and AVL Tree Operations Implement BST operations:
  - a. Insert a node
  - b. Delete a node
  - c. Search for a value
  - d. Display the tree using Inorder traversal to verify correctness
13. AVL Tree Operations Implement BST operations:
  - a. Insert a node
  - b. Delete a node
  - c. Search for a value
  - d. Implement AVL tree insertion and deletion with rotations to maintain balance
  - e. Display the tree using Inorder traversal to verify correctness
14. Hash Table Implementation and Collision Handling
  - a. Implement a hash table using an array
  - b. Design and apply a simple hash function
  - c. Implement collision resolution techniques: Separate Chaining using linked lists Open Addressing: linear probing, quadratic probing, and double hashing
  - d. Perform insertion, deletion, and searching operations.
  - e. Demonstrate handling of collisions with sample inputs.
15. Dictionary Implementation Using Linear List and Skip List
  - a. Implement a dictionary using a linear list: Perform insertion, deletion, and search operations.
  - b. Implement a dictionary using a skip list for faster search: Include multiple levels with forward pointers. Implement insertion, deletion, and search.
  - c. Compare the efficiency of linear list and skip list implementations with sample data order

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. GCC Compiler (Open source/ Freeware)

**Books and Materials**

**Text Books:**

1. Horowitz, Ellis, Sartaj Sahni, and Dinesh Mehta. *Fundamentals of Data Structures in C++*, 2<sup>nd</sup> ed., Schaum's Outlines, Universities Press, 2019.
2. Malik D.S. *Data Structures and Algorithms in C++*, 5<sup>th</sup> ed., Course Technology, 2010.

**Reference Books:**

1. Drozdek, Adam. *Data Structures and Algorithms in C++*, 5<sup>th</sup> ed., Cengage Learning, 2025.
2. Dale, Nell, Chip Weems, and Tim Richards. *C++ Plus Data Structures*, 6<sup>th</sup> ed., Jones & Bartlett Learning, 2018.

### A9304 - Computer Aided Engineering Graphics

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

This course provides students from diverse engineering disciplines with essential skills in computer-aided engineering drawing using AutoCAD. It focuses on the fundamentals of constructing two-dimensional geometric objects, understanding orthographic projections of points, lines, planes, and solids, and applying isometric projections. Students will learn to use AutoCAD tools such as Draw, Modify, Layers, and Dimensioning to create technically accurate drawings aligned with engineering standards. The course emphasizes practical applications relevant to civil, electrical, electronics, and other engineering fields, enabling students to visualize, interpret, and communicate design concepts effectively.

##### Course Pre/Co-requisites

This course has no specific pre-requisites and co-requisites.

##### Relevant Sustainable Development Goals (SDG(s))

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

SDG 12: Responsible Consumption and Production

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9304.1. Analyze the basic drawing and editing tools to create and modify 2D sketches.
- A9304.2. Interpret the projection principles to draw points and lines in different quadrants.
- A9304.3. Compare the projected views of planes to identify their true shape and inclination.
- A9304.4. Apply the orthographic projection principles to construct two-dimensional views of solids.
- A9304.5. Construct isometric views by applying principles derived from orthographic drawings.

#### Course Syllabus

##### Unit-I:

**Introduction to AutoCAD:** User Interface and Workspace Customization, Basic Drawing Tools, Modify and Editing Tools, Properties and Object Management, Layer Management, Dimensioning and Annotation, Layouts and Plotting, Geometrical construction of two-dimensional objects.

##### Unit-II:

**Orthographic Projections:** Reference plane, importance of reference lines or Plane, Projections of a point situated in any one of the four quadrants. Projections of Straight Lines: Projections of straight lines parallel to both reference planes, perpendicular to one reference plane and parallel to other reference plane, inclined to one reference plane and parallel to the other reference plane.

##### Unit-III:

**Projections of Planes:** Regular planes Perpendicular to both reference planes, parallel to one reference plane and inclined to the other reference plane; plane inclined to both the reference planes.

**Unit-IV:**

**Projections of Solids:** Types of solids: Polyhedra and Solids of revolution. Projections of solids in simple positions: Axis perpendicular to horizontal plane, Axis perpendicular to vertical plane and Axis parallel to both the reference planes, Projection of Solids with axis inclined to one reference plane and parallel to another plane.

**Unit-V:**

**Isometric Projections:** Isometric coordinates, Isometric Scale, Isometric Views of Lines, Planes and solids. Conversion of Isometric View to Orthographic View and Vice-versa.

**Books and Materials**

**Text Books:**

1. Bhatt N.D., Panchal V.M. & Ingle P.R., *Engineering Drawing*, 53<sup>rd</sup> Edition, Charotar Publishing House, 2019.
2. K. Balaveera Reddy et al, *Computer Aided Engineering Drawing*, 2<sup>nd</sup> Edition, CBS Publications, 2015.

**Reference Books:**

2. Basant Agrawal B. and Agrawal C. M., *Engineering Graphics*, 3<sup>rd</sup> Edition, TMH Publication, 2020.
3. Shah, M.B., Rana B.C., *Engineering Drawing and Computer Graphics*, 2<sup>nd</sup> Edition, Pearson Education, 2009.

## A9022 - Product Design and Development

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	0	45	45	1	40	60	100

### Course Description

#### Course Overview

This course equips students with a community-focused approach to product design, taking them from initial concept to a refined, practical solution. They will learn core design principles, understand the product development life cycle, and explore essential hardware and software tools through curated resources. Students will engage in prototyping, testing, and iterative refinement using feedback from community partners, ensuring sustainability and user-centered results. The course also develops their ability to document and communicate designs effectively, including preparing detailed specifications and user manuals.

#### Course Pre/Co-requisites

A9021 - Community Centered Design Thinking

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

SDG 11: Sustainable Cities and Communities

SDG 12: Responsible Consumption and Production

### Course Outcomes

After the completion of the course, the student will be able to:

- A9022.1. Explain the principles of product design and the product development life cycle, with an emphasis on addressing real-world community needs
- A9022.2. Generate and evaluate innovative product concepts using relevant Hardware and Software design tools
- A9022.3. Develop functional prototypes using appropriate prototyping tools, and perform initial testing and validation
- A9022.4. Refine prototypes through iterative feedback loops, integrating sustainability and user-centered design principles
- A9022.5. Document and communicate product designs effectively with comprehensive specifications and user manuals tailored for community stakeholders

### Course Syllabus

#### Unit-I:

**Introduction to Product Design for Community Need:** Understanding the principles and significance of product design, product development life cycle. Communicating design concepts to community partner. Refining designs based on feedback.

#### Unit-II:

**Product Development Skills:** Identify & Develop proficiency in using relevant Hardware & Software design tools. Equip with curated resources on tools essential for managing and scaling products effectively.

**Unit-III:**

**Prototype & Testing:** Introducing the concepts and purpose of prototyping. Creating functional prototypes to represent product designs using appropriate tools and techniques. Testing prototypes for performance, usability, and alignment with design goals.

**Unit-IV:**

**Iterative Refinement:** Refinement of prototypes based on community partner feedback and verification of product sustainability, with integration of user-centered design principles to align with community needs and expectations.

**Unit-V:**

**Documentation and Communication Strategies:** Documenting product designs with detailed specifications, Effective communication strategies for conveying designs to community partners, Preparation of user manuals and documentation for community partners.

**Activity Plan**

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
1	Unit-I: Intro to Product Design	Understand product design principles & life cycle	Concept briefing	Case study analysis of successful community-based product	Short reflection: "Importance of product design for communities"	CO1
2	Unit-I: Intro to Product Design	Identify community needs & build empathy	Concept briefing + Fieldwork preparation	Practice empathy mapping, mock survey in class	Conduct 3–5 interviews/surveys with stakeholders	CO1, CO2
3	Unit-I: Intro to Product Design	Define problem statements	Guided teamwork + Brainstorm session	Develop "How Might We" questions, prioritize opportunities	Submit refined problem statement document	CO1, CO2
4	Unit-II: Product Development Skills	Generate diverse concepts	Creativity Hands-on Session (SCAMPER, Role-storming)	Group ideation, sketching concepts	Sketchbook submission (min. 10 ideas)	CO2
5	Unit-II: Product Development Skills	Apply digital design tools	Hands-on training + Peer support	Practice in Figma / SolidWorks / TinkerCAD	Submit wireframes / 3D sketches	CO2
6	Unit-II: Product Development Skills	Evaluate concepts systematically	Evaluation + User testing demo	Apply Pugh method to concepts, gather peer feedback	Submit evaluation matrix + selected final concept	CO2, CO3

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
7	Unit-III: Prototype & Testing	Build low-fidelity prototype	Practical lab session + Peer feedback	Teams construct basic prototypes from cardboard/foam	Submit prototype photos + reflection	CO3
8	Unit-III: Prototype & Testing	Develop high-fidelity prototype	Prototype building - Hands-on Session	Create working model with core functionality	Submit tested prototype (video evidence optional)	CO3
9	Unit-IV: Iterative Refinement	Collect & apply user/community feedback	User feedback roundtable	Usability testing with peers/partners	Submit iteration log with design changes	CO4
10	Unit-IV: Iterative Refinement	Refine based on sustainability & ergonomics	Fine-tuning activity	Refine materials, safety, visual design, ergonomics	Submit refined prototype design brief	CO4
11	Unit-V: Documentation	Document & communicate design	Documentation + Visual design session	Create instruction guides, packaging design, visuals	Draft user manual (Canva/InDesign optional)	CO5
12	Unit-V: Communication Strategies	Present & reflect on outcomes	Final Showcase	Final presentations: video demos, posters, product showcase	Final report, user manual, and presentation	CO5

## Books and Materials

## A9005 – Probability Distributions and Applied Statistics

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		PI	TW+SL			H	C	CIE
L	T	P	SL					
45	15	0	60	120	4	40	60	100

### Course Description

#### Course Overview

This course provides an undergraduate foundation in both probability distributions and mathematical statistics and at the same time provides an indication of the relevance and importance of the theory in solving practical problems in the field of multidisciplinary engineering applications. The mathematical skills sustained from this course form a suitable base to analytical and theoretical concepts encountered in engineering profession.

#### Course Pre/Co-requisites

This course has no specific prerequisite and co-requisite.

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

### Course Outcomes

After the completion of the course, the student will be able to:

- A9005.1. Identify an appropriate probability distribution for a given discrete or continuous random variable.
- A9005.2. Make use of probability distributions to analyze and solve a given problem.
- A9005.3. Interpret correlation coefficient, perform regression analysis to fit the best curve and make inferences about population parameters based on sample data.
- A9005.4. Inspect scientific hypothesis and estimate confidence intervals at different levels.
- A9005.5. Compute P-value of a test statistic using component of hypothesis test.

### Course Syllabus

#### Unit-I:

**Random Variables:** Concept of a Random Variable, Discrete probability Distributions, Continuous Probability Distributions. Mean and Variance of Random Variables.

#### Unit-II:

**Discrete and Continuous Distributions:** Discrete Distributions: Binomial Distribution, Poisson Distribution, Continuous Distributions: Uniform Distribution, Normal Distribution, areas under the Normal Curve, applications of the Normal Distribution.

#### Unit-III:

**Correlation and Regression:** Scatter diagram, Positive and Negative correlation, limits for coefficient of Correlation, Karl Pearson's coefficient of correlation, Spearman's Rank correlation, Regression Analysis: Concept, two lines of regression, Properties of regression coefficients. **Fundamental Sampling Distributions:** Random Sampling, some Important Statistics, Sampling Distributions, Sampling Distribution of means and the Central Limit Theorem, t- Distribution, F-Distribution.

**Unit-IV:**

**Estimation and Testing of Hypothesis for Large samples:** Point estimation, Maximum error estimate, Interval Estimation, Introduction to Hypothesis, Level of significance, one tailed and two tailed test, Test concerning one mean and one proportion, Two means and two Proportions.

**Unit-V:**

**Testing of Hypothesis for Small samples:** Test for single mean, difference of means and paired t-test, Test for ratio of variances (F-test), Chi-square test for goodness of fit and independence of attributes.

**Books and Materials**

**Text Books:**

1. Gupta, S.C. and Kapoor, V. K. *Fundamentals of Mathematical statistics* , 10<sup>th</sup> ed., S Chand & Sons, New Delhi, 2000.
2. Ronald E. Walpole, Raymond H. Myers, Sharon L. Myers, Keying Ye *Probability and Statistics for Engineers & Scientists* , 9<sup>th</sup> ed., Pearson Publishers, 2016.

**Reference Books:**

2. T.T. Soong *Fundamentals of Probability and Statistics for Engineers* , John Wiley & Sons, 2004.
3. Miller and Freund's *Probability and Statistics for Engineers* , 8<sup>th</sup> ed., Pearson Educations, 2011.

### A9506 – Discrete Mathematical Structures

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course will provide the mathematical fundamentals needed to understand computer applications. This course will begin by covering the mathematical concepts necessary in the study of propositional and predicate logic. Next, it covers the concepts of relations and ordering to study and construct the lattices. Further, it discusses the concepts of algebraic systems like semi groups and groups. Then move on to the recurrence relations, which help in writing efficient code. Finally, it covers the topics of graph theory to analyze complex structures using the concepts of planar, Euler graphs, and chromatic numbers.

##### Course Pre/Co-requisites

This course has no specific prerequisite or co-requisite.

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9506.1. Identify the importance of statements and predicate calculus in deriving valid inferences.
- A9506.2. Use relations and ordering methods to identify the relationship among the elements in the system.
- A9506.3. Select suitable algebraic systems to find solutions for real-time problems.
- A9506.4. Apply the concepts of counting, inclusion, and exclusion principles to solve partitioning problems in computer algorithms.
- A9506.5. Make use of graph concepts and computing methods to solve complex problems, and also examine the recurrence relations to improve the code efficiency.

#### Course Syllabus

##### Unit-I:

**Propositional Logic:** Statements and Notation, Connectives, Well-formed formulas, Tautologies, Equivalence of formulas and Tautological implications, Normal Forms, Rules of Inference, Consistency of Premises, Direct and Indirect method of proof, Predicates, the statement functions, Variables and Quantifiers (Single and Multiple), Free and Bound Variables.

##### Unit-II:

**Relations and Ordering:** Basics of Relations, Relation Matrix and Digraphs, Properties of Binary Relations on a Set, Equivalence Relations, Transitive closure (Warshall's algorithm), Partial Ordering Relations, Hasse diagrams. Lattices as Partially Ordered Sets, Definitions and Examples, Properties of Lattices, Some Special Lattices.

**Unit-III:**

**Algebraic Structures:** Algebraic Systems: Definitions and Examples, Simple algebraic systems and General properties. Semigroups and Monoids: Definitions and Examples. Groups and Subgroups: Definitions and Examples, Order of an element, Cyclic group: Definition and Examples.

**Unit-IV:**

**Elementary Combinatorics:** Basics of Counting, Combinations, and Permutations with Repetitions and Constrained Repetitions, Binomial Coefficients, The Binomial and Multinomial Theorems (Without Proofs), The Principle of Inclusion-Exclusion (for two and three-sets), Pigeonhole principle, The Generalized Pigeonhole Principle.

**Unit-V:**

**Recurrence Relations and Graph Theory:** Solving Recurrence Relations by Substitution, The method of characteristic Roots, Solutions of Linear Homogeneous and Inhomogeneous recurrence relations of second and third order. Basic Concepts of Graphs, Adjacency Matrix, Isomorphism and Subgraphs, Planar Graphs, Euler Circuits, Hamiltonian graphs, Graph Coloring, Chromatic Numbers, Trees and their properties, Spanning trees (BFS and DFS algorithms).

**Books and Materials**

**Text Books:**

2. Joe L. Mott, Abraham Kandel, Theodore P. Baker. *Discrete Mathematics for Computer Scientists and Mathematicians*, 3<sup>rd</sup> 2nd Edition, Prentice Hall of India Learning Private Limited, New Delhi, India,2009.

**Reference Books:**

1. Kenneth H. Rosen., *Discrete Mathematics and its Applications*, 9<sup>th</sup> 7th Edition, Tata McGraw Hill, India,2017.
2. Ralph P. Grimaldi. *Discrete and Combinatorial Mathematics - an applied introduction*, 32<sup>nd</sup> Pearson Education, 5th edition.

## A9701 – Artificial Intelligence

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

### Course Description

#### Course Overview

This is an undergraduate course to acquire the ability to design intelligent solutions to problems in a variety of domains and business applications such as natural language Processing, text mining, and robotics, reasoning and problem-solving. AI will focus on problem solving, reasoning, planning and gaming. Through learning problem solving skills can be acquired. The course enables to choose data science domain to implement machine learning and deep learning applications.

#### Course Pre/Co-requisites

A9511 - Python Programming Laboratory

A9506 - Discrete Mathematical Structures

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9701.1. Apply AI techniques to solve game playing theorem proving and machine learning.
- A9701.2. Apply the propositional logic to AI designs.
- A9701.3. Learn different playing and reinforcement learning techniques.
- A9701.4. Examine the role of searching strategies in AI environment.
- A9701.5. Analyse the constraint satisfaction problems for problem solving.

### Course Syllabus

#### Unit-I:

**Introduction:** Introduction to AI - Intelligent Agents, Problem-Solving Agents, Searching for Solutions - Breadth- first search, Depth- first search, Hill-climbing search, Simulated annealing search, Local Search in Continuous Spaces.

#### Unit-II:

**Adversarial Search :** Games, Optimal decisions in games, The minimax algorithm, Alpha–Beta pruning, Defining Constraint Satisfaction Problems, Constraint Propagation, Backtracking search for CSPs, Knowledge-Based Agents,

#### Unit-III:

**Propositional Logic:** Inference and proofs, Proof by resolution, Horn clauses and definite clauses. First-Order Logic : Syntax and Semantics of First-Order Logic, Using First Order Logic, Knowledge Engineering in First-Order Logic. Inference in First-Order Logic: Propositional vs. First-Order Inference, Unification, Forward Chaining, Backward Chaining, Resolution.

**Unit-IV:**

**Planning :** Definition of Classical Planning, Algorithms for Planning with State Space Search, Planning, Graphs, Analysis of Planning approaches, Hierarchical Planning. Reinforcement learning:

**Unit-V:**

**Reinforcement learning :** Introduction, passive Reinforcement learning, active Reinforcement learning, Generalization in reinforcement learning. Robotics: Introduction, Robot Hardware, Robot Perception, planning to move, moving Robotic Software Architectures.

**Books and Materials**

**Text Books:**

1. Russell, Stuart J., and Peter Norvig. *Artificial Intelligence: A Modern Approach* , 4<sup>th</sup> ed., Pearson 2024..

**Reference Books:**

3. Luger, George F. *Artificial Intelligence: Structures and Strategies for Complex Problem Solving.*, 6<sup>th</sup> ed., Pearson, 2008.
4. Goel, Shivani. *Express Learning – Artificial Intelligence* , Pearson Education India, 2013.

## A9601 – Object Oriented Programming through Java

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

### Course Description

#### Course Overview

This course offers a comprehensive understanding of OOP concepts using Java. It emphasizes various aspects of core Java Environment suitable to write efficient, maintainable and portable code for real world applications. The course builds a strong foundation in OOP principles, packages, interfaces, exception handling and multithreading. It also provides in depth knowledge to implement Collection framework to manage and organize the data efficiently. The course introduces GUI programming using Swings and event handling mechanisms to create interactive applications. It further covers JDBC concepts to connect Java applications with databases and perform CRUD operations using both console and GUI interfaces

#### Course Pre/Co-requisites

A9501 – Programming for Problem Solving

A9503 – Data structures

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9601.1. Make use of OOP principles and programming constructs to build console-based real-time applications.
- A9601.2. Examine the applications for Exception Handling and Multithreading.
- A9601.3. Implement Collection Framework and Streams to organize and manipulate data efficiently.
- A9601.4. Build GUI applications using Swings and event handling.
- A9601.5. Analyze and implement JDBC concepts to perform database operations using console and GUI-based applications.

### Course Syllabus

#### Unit-I:

**Introduction to OOP and Java:** Need for OOP paradigm-Difference between Procedural and Object-Oriented Programming, OOP Concepts, Java Buzz Words, Arrays, Encapsulation-Class, Objects, Methods and Constructors, this keyword, static keyword, Overloading-Methods and Constructors. Inheritance Basics, super keyword, Inheritance types, Method Overriding, Dynamic Method Dispatch, Abstract classes, final keyword. Defining and implementing interfaces, Extending interfaces. Defining a Package, Finding Packages and Class path, Access Protection and Importing Packages.

#### Unit-II:

**Exception Handling and Multithreading:** Exception-Handling Fundamentals, Exception Types, Using try catch, throw throws and finally keywords, Built-in Exceptions, Creating own exception subclasses. Multithreading: Life cycle of a thread, creating threads, thread priorities, Synchronizing threads, Inter thread Communication. String class and StringBuffer.

**Unit-III:**

**Collections Framework and Streams:** Collections Hierarchy, Collection classes-ArrayList, LinkedList, HashSet, TreeSet, HashMap and TreeMap, StringTokenizer, Arrays class. Streams Hierarchy, File Streams FileInputStream and FileOutputStream, FileReader and FileWriter, Performing read, write operations on Files and Serialization.

**Unit-IV:**

**GUI Programming with Java and Event Handling:** Delegation Event Model, Event Sources, Event Classes, Event Listener Interfaces, Handling Mouse and Keyboard Events, Layout Managers-FlowLayout, BorderLayout, GridLayout and CardLayout. Swings: Introduction to swing, swings Vs AWT, hierarchy for swing components. JFrame, JPanel, JComponent, JLabel, JTextField, JTabbedPane, Swing Buttons, JScrollPane, JComboBox, JTable.

**Unit-V:**

**JDBC:** Architecture, Types of JDBC Drivers, JDBC Components: DriverManager, Connection, Statement, PreparedStatement, Callable Statement ResultSet, Establishing Connection with Data Base, Statement, PreparedStatement and Callable Statement. Performing CRUD operations (Create, Retrieve, Update and Delete) using console, Connecting and retrieving data using with GUI (Swing).

**Books and Materials**

**Text Books:**

1. Herbert Schildt, and Danny Coeard. *Java: The Complete Reference*, 13<sup>th</sup> Tata McGraw-Hill Education, 2024.

**Reference Books:**

1. Y. Daniel Liang, *Introduction to Java Programming-Comprehensive Version*, 10<sup>th</sup> Pearson Education, 2018.
2. Kathy Sierra, Bert Bates *OCA Java SE 8 Programmer*, 1<sup>st</sup> reprint, McGraw-Hill Education, 2017

### A9507 – Operating Systems

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course provides a thorough understanding of how operating systems function as a vital component of computing systems. It begins by exploring the services of an operating system in managing hardware and software resources. Students will learn how systems handle multiple tasks and processes efficiently, ensuring smooth execution and coordination. The course also examines how multiple processes communicate and synchronize to avoid conflicts and ensure consistency. Techniques for managing memory effectively, including strategies for allocation and optimization, are explored. Learners gain insight into how files and storage devices are organized, accessed, and maintained by the system. Efficient storage and retrieval methods, along with space management, are discussed in practical contexts. The challenges of resource contention and how systems deal with issues like deadlocks are also analyzed. By the end, students will understand how an operating system ensures reliability, performance, and user interaction.

##### Course Pre/Co-requisites

A9501 – Programming for Problem Solving

A9505 – Computer Organization

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

SDG 11: Sustainable Cities and Communities

##### Course Outcomes

After the completion of the course, the student will be able to:

- A9507.1. Demonstrate various services provided by operating system for both users and system components.
- A9507.2. Examine the core concepts of process management in coordinating the concurrent execution of multiple processes.
- A9507.3. Utilize memory management techniques to optimize the efficient utilization of main memory.
- A9507.4. Choose appropriate file and disk management techniques to ensure efficient data storage and quick access.
- A9507.5. Employ a suitable deadlock handling method to manage the allocation of resources among processes.

##### Course Syllabus

###### Unit-I:

**Operating Systems Overview and Process Management:** Definition, Operating System Types, Operating System operations, Operating system services, System calls and System Programs. Process concepts- Process, Process State Diagram, PCB and Operations on processes, Process Scheduling- Scheduling Criteria, Scheduler Types and Scheduling Algorithms.

**Unit-II:**

**Process Synchronization:** Inter Process Communication- Pipes, Message Passing and Shared Memory. Concept of Synchronization, Critical section problem, Peterson's solution, Semaphores, Classic problems of Synchronization- The Bounded Buffer Problem, The Readers –Writers Problem, Dining - Philosophers Problem.

**Unit-III:**

**Memory Management:** Introduction to Memory Management, Swapping, Contiguous Memory Allocation, paging, segmentation, virtual memory, demand paging, Page-replacement algorithms, allocation of frames, thrashing.

**Unit-IV:**

**File and Disk Management:** Concept of a file – File Attributes, File Types, Access Methods, Directory Structures, File System Implementation, Directory Implementation, File Allocation methods, and Free-Space management. Introduction to Magnetic Disks, Disk Structures, Disk Scheduling, Swap Space Management.

**Unit-V:**

**Deadlocks:** System Model, Deadlock Characterization-Necessary Conditions, Resource Allocation Graph, Deadlock Prevention, Deadlock Avoidance - RAG Algorithm, Banker's Algorithm, Detection- Single Instance of a Resource type, Multiple Instances of a resource type, recovery from deadlock.

**Books and Materials**

**Text Books:**

1. Abraham Silberschatz, Peter Baer Galvin, Greg Gagne. *Operating System Concepts* , 9<sup>th</sup> Edition, Wiley India Private Limited, New Delhi,2019.

**Reference Books:**

1. Stallings, William. *Operating Systems: Internals and Design Principles*. 9<sup>th</sup> ed., Pearson Education, 2017.
2. Das, Sumitabha. *Your UNIX: The Ultimate Guide*. 3<sup>rd</sup> ed., McGraw-Hill, 2013.
3. Chan, Terrence. *UNIX System Programming Using C++*. 1<sup>st</sup> ed., Prentice Hall PTR, 1997.

## A9511 – Python Programming Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

This Python programming lab is designed to develop strong problem-solving and coding skills through hands-on practice. It starts with basic concepts like installation, simple output, and input handling to build a clear understanding of the language. Students learn to work with variables, operators, and expressions to perform computations and make logical decisions using conditional statements. Iteration techniques are practiced to solve problems like reversing numbers, factorials, and Fibonacci series. The lab strengthens skills in string handling, including slicing, searching, and transformations. Core Python data structures such as lists, dictionaries, tuples, and sets are explored to manage and process data effectively. Emphasis is placed on writing reusable code through user-defined functions, recursive calls, and lambda expressions. Students work with Python modules to handle tasks like date, time, and calendars. Error handling is introduced to ensure safe and reliable programs. The course concludes with file operations for creating, reading, appending, and summarizing data, preparing students for real-world applications.

#### Course Pre/Co-requisites

A9501 - Programming for Problem Solving

A9502 - Programming for Problem Solving Laboratory

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9511.1. Interpret basic programming constructs and control statements to solve simple computational problems
- A9511.2. Apply string operations and regular expressions to process and manipulate text.
- A9511.3. Make use of data structures lists, tuples, sets, and dictionaries to store and organize data effectively.
- A9511.4 Implement modular programming concepts using functions, modules, and file handling techniques.
- A9511.5 Develop applications using exception handling constructs to handle runtime errors in software applications.

### Course Syllabus

#### Theory:

1. **Python Fundamentals and Control Statements:** Introduction to Python, Features of Python, Identifiers, Reserved Words, Data Types, Variables and Constants, Input / Output Statements, Conditional Statements – if, if-else, if-elif-else; Iterative Statements – for, while; Jump / Transfer Statements – break, continue, pass.

2. **Strings and Regular Expressions:** Strings: String Definition, Indexing, Slicing, Multiline Strings, Escape Sequences, String Formatting, Mathematical Operations on Strings, Checking Membership, Comparison, String Manipulation Techniques, String Immutability, Built-in String Functions and Methods. Regular Expressions: Pattern Matching, Search, Replace, Match Objects, Grouping.
3. **Functions, Modules:** Functions: Introduction, Function Definition, Function Call, Types of Arguments, Return Statement, Recursive Functions, Anonymous Functions (Lambda). Modules: Importing, Creating and Using Modules, Standard Libraries.
4. **Exception Handling and File Handling:** Exception Handling – Errors in Python, types of exceptions, try, except, else, finally blocks, raise keyword, custom exception classes. File Handling – Introduction, File Types, Opening and Closing Files, Reading and Writing in Text and Binary Files, File Modes and Methods (read(), readline(), write(), etc.), File Path Operations, Copy and Merge.

**List of Experiments:**

1. Introduction to Python Lab: Installation and Simple Output Display.
  - a. Write a python program to print your Name, Roll Number, and Branch.
  - b. Write a python program to read a string “Python Programming” and display it on the screen.
  - c. Write a python program to read integer, float & string values and display them on the screen.
2. Programs using Input Output Statements, Variables and Expressions.
  - a. Write a python program to read a float value and convert Fahrenheit to Centigrade.
  - b. Write a python program to find the area of triangle.
  - c. Write a python program to read the marks in 5 subjects and display the average.
3. Programs using various operators in Python.
  - a. Write a python program for demonstrating the usage of comparison operators.
  - b. Write a python program to swap / interchange two numbers.
  - c. Write a python program for demonstrating the usage of unary, shift, logical, membership and identity operators.
4. Programs using Conditional Statements.
  - a. Write a python program to check a given number is Even or Odd.
  - b. Write a python program to find the greatest of 3 integer numbers.
  - c. Write a python program to demonstrate nested if statement.
5. Programs using Iterative Statements.
  - a. Write a Python program to reverse the digits of a given number.
  - b. Write a Python program to find the factorial of a given number.
  - c. Write a python program to display factors of a given integer number.
  - d. Write a python program to print Fibonacci numbers.
  - e. Write a python program to display all prime numbers between 0 to n.
6. Programs using Strings and its Operations.
  - a. Write a program that asks the user to enter a string and perform the following:
    - i. Total number of characters in the string.
    - ii. Repeat the string 10 times.

- iii. The first character of the string.
  - iv. The first three characters of the string.
  - v. The last three characters of the string.
  - vi. The string in backwards.
  - vii. The seventh character of the string if it exists, otherwise display a message "Not exist".
  - viii. The string with its first and last characters removed.
  - ix. The string into capital case.
  - x. The string with every letter replaced by a space.
- b. Write a python program to demonstrate string concatenation, repetition, and membership testing.
  - c. Write a python program to demonstrate built-in string functions: upper(), lower(), strip(), find().
  - d. Write a Python program to count the number of vowels in a given string.
7. Programs using Python Data Structures (Lists).
- i. Print the total number of items in the list.
  - ii. Print the last item in the list.
  - iii. Print the list in reverse order.
  - iv. Print Yes if the list contains a 5 and No otherwise.
  - v. Print the number of occurrences of an element in the list.
  - vi. Remove the first and last items from the list and sort the remaining items.
  - vii. Print how many integers in the list are less than a given value.
  - viii. Print the average of the elements in the list.
  - ix. Print the largest and smallest value in the list.
  - x. Program which applies list comprehensions to generate even numbers.
8. Programs using Python Data Structures (Dictionary).
- a. Write a python program for demonstrating the creation of dictionary, accessing dictionary elements, modifying dictionary elements, finding length and possible operations.
  - b. Write a python program to create a dictionary of students with keys as roll numbers and values as names. Perform operations like insert, update and modify student data.
  - c. Write a Python program with the following requirements: Create a dictionary that stores 10 usernames as keys and their corresponding passwords as values. Prompt the user to enter a username and a password. Check the entered credentials and:
    - (i) If the username does not exist, display: "Not a valid user."
    - (ii) If the username exists but the password is incorrect, display: "Invalid password."
    - (iii) If both are correct, display: "Welcome".
9. Programs using Python Data Structures (Tuples and Sets).
- a. Write a python program to demonstrate various operations on tuples.
  - b. Write a python program to demonstrate various operations on sets.
10. Programs using User Defined Functions.
- a. Define a lambda function to compute square and cube.
  - b. Write a python program to find factorial of a given number using function.
  - c. Write a python program to find factorial of a given number using recursive function.

11. Programs using Modules.
  - a. Write a Python program to display the date and time using the time module.
  - b. Write a Python program that prints the calendar of a particular month.
  - c. Write a Python program to check whether a given year is a leap year or not using the calendar module.
12. Programs using Exception Handling.
  - a. Write a Python program to read two integers from the user and perform division, handling ZeroDivisionError and ValueError using try-except-finally.
  - b. Write a Python program that asks for user input and converts it to an integer, with exception handling for invalid data.
13. Programs on File Handling.
  - a. Write a Python program to read a text file, handling File Not Found Error.
  - b. Write a Python program to count the number of lines, words, and characters, and then write the summary of a file to a new output file with exception handling.
  - c. Create a text file named `student_data.txt`.
  - d. Accept student details (roll number, name, marks) from the user and write them to the file.
  - e. Read and display the contents of the file.
  - f. Append new records to the same file and display the updated contents.

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. Jupyter notebook or Pycharm IDE, Python Run Time System

**Books and Materials**

**Text Books:**

1. Reema Thareja. *Python Programming using Problem solving Approach*, 3<sup>rd</sup> Edition Oxford University Press, New Delhi India, 2017.
2. Gowrishankar S., Veena A.. *Introduction to Python Programming*, 1<sup>st</sup> Edition, CRC Press, Boca Raton, Florida, USA, 2018..

2. Timothy A Budd. *Exploring Python*, 8<sup>th</sup> Edition, Tata McGraw Hill, New Delhi, 2019.
3. Allen B. Downey. *Think Python: How to Think Like a Computer Scientist*, 2<sup>nd</sup> Edition, O'Reilly Media, California, USA, 2016

## A9602 - Object Oriented Programming through Java Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL			H	C	CIE
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

This course provides a comprehensive coverage of theory and practice of OOP concepts using Java. The course focuses on different aspect of core Java Environment suitable to write efficient, maintainable, and portable code for real world application. It provides strong foundation on OOP Principles, Packages, and Interfaces and also illustrates Exception Handling and Multithreaded mechanisms. The course provides in depth knowledge to implement Collection framework. Emphasis on Swing concepts used for GUI applications is given with event handling. It also covers the implementation of JDBC to connect Java applications with databases. The course plays a vital role in developing front-end interface for Mini and Major Projects

#### Course Pre/Co-requisites

A9502 - Programming for Problem Solving Laboratory

A9503 - Data structures

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9602.1. Make use of various constructs to write a console application.
- A9602.2. Use principles of OOP to develop real time applications.
- A9602.3. Examine the applications for Exception Handling and Multithreading.
- A9602.4. Implement Collection Framework to organize data efficiently.
- A9602.5. Build GUI applications using Swings connecting JDBC.

### Course Syllabus

#### List of Experiments:

1.
  - a. Read the marks of a student in 4 subjects and find grade.
  - b. Define a class Rectangle with data members length and width. Write methods to find perimeter and area of a rectangle (class and object).
  - c. Create a class Account with data members name, acno and balance. Use appropriate methods to perform various operations like deposit, withdraw, and balance check.
2.
  - a. Create a class Student with appropriate data and methods using constructor.
  - b. Create overloaded methods to find volume of Sphere, Cylinder and Cone.
3.
  - a. Read two matrices of size  $m \times n$ ,  $p \times q$ , perform the multiplication of matrices.
  - b. Declare a class called Employee having employee-id and employee-name as members. Extend class Employee to have a sub class called Salary having designation and monthly salary as members. Define the appropriate constructors and methods, use **this** and **super** keywords, display the employees drawing salary more than 30000.

4. Write a Java program that creates an abstract base class Shape with two members base and height, a member function for initialization and a method to compute shapeArea(). Derive two specific classes Triangle and Rectangle which override the method shapeArea(). Write a driver class (main) to display the area of the triangle and rectangle (Use **super** keyword).
5. Create a Package **Measure**; in which store a class named **Convertor** that contains methods to convert mm to cm, cm to m and m to km. Define a class **NeedConvertor** that imports the **Convertor** class, now store **NeedConvertor** outside the package **Measure**.
6.
  - a. Read two integers as strings Num1 and Num2 to perform division. The program throws a NumberFormatException if Num1 or Num2 cannot be converted to integers, and if Num2 is Zero throw an ArithmeticException. Display the exception message.
  - b. In the Custom Exception Test class, the age is expected to be a positive number. It would throw the user defined exception NegativeAgeException if the age is assigned a negative number.
7.
  - a. Create a multithreaded java program by creating a subclass of Thread and then creating, initializing, and starting two Thread objects from your class. The threads will execute concurrently and display “Java is object oriented” in console window.
  - b. Write a program to implement thread synchronization using synchronized block and synchronized method.
8. Use an ArrayList to manage Employee objects for insertion, display and remove.
9.
  - a. Implement MouseListener and MouseMotionListener to handle various mouse events.
  - b. Implement KeyListener to handle key events.
10. Create a Simple login window to validate a user with name and password.
11. Create a user interface to insert employee details, Display the data in TextArea.
12. Create a JTable to display various fields of Student data like RollNo, Name, Branch, Year, Percentage etc.
13. JDBC Program to create, retrieve, insert, delete and update student data.
14. JDBC program to create, retrieve, insert, delete and update student data using Prepared Statement.

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. JDK (Open Source/Freeware)

**Books and Materials**

**Text Books:**

1. Herbert Schildt, and Danny Coeard. *Java: The Complete Reference*, 13<sup>th</sup> Tata McGraw-Hill Education, 2024.

**Reference Books:**

1. Y. Daniel Liang, *Introduction to Java Programming-Comprehensive Version*, 10<sup>th</sup> Pearson Education, 2018.
2. Kathy Sierra, Bert Bates *OCA Java SE 8 Programmer*, 1<sup>st</sup> reprint, McGraw-Hill Education, 2017

## A9508 – Operating Systems Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

This course provides hands-on experience with UNIX/Linux operating system commands, shell scripting, and system programming. Students will practice fundamental file and process management commands and explore inter-process communication (IPC) mechanisms such as pipes, FIFOs, shared memory, message queues, and semaphores. The course also includes simulation of essential commands and implementation of system-level programming using UNIX I/O system calls. Additionally, students will develop and analyze memory management techniques, page replacement policies, disk scheduling algorithms, and deadlock avoidance strategies. Through practical programming exercises, the course aims to strengthen problem-solving skills and deepen understanding of operating system concepts and internal mechanisms.

#### Course Pre/Co-requisites

A9501 - Programming for Problem Solving

A9502 - Programming for Problem Solving Laboratory

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 7: Affordable and Clean Energy

SDG 8: Decent Work and Economic Growth

SDG 11: Sustainable Cities and Communities

### Course Outcomes

After the completion of the course, the student will be able to:

- A9508.1. Utilize Unix utilities and system calls to implement and manage processes, memory, and file systems effectively in a UNIX/Linux environment.
- A9508.2. Apply inter-process communication (IPC) mechanism to establish and manage communication among processes.
- A9508.3. Employ synchronization using semaphores to coordinate concurrent tasks in operating systems.
- A9508.4. Develop shell scripts and simulate file handling operations to access and manage data from disk storage efficiently.
- A9508.5. Implement memory management techniques, disk scheduling algorithms, and deadlock handling mechanisms to demonstrate key operating system services.

### Course Syllabus

#### List of Experiments:

1. Practice commands – like `mkdir`, `rmdir`, `cat`, `nl`, `ls`, `cp`, `mv`, `rm`, `man`.
2. Practice commands – like `wc`, `uniq`, `comm`, `cmp`, `diff`, `ln`, `unlink`, `chmod`, `du`, `df`.
3. Practice commands – `head`, `tail`, `sort`, `grep`, `egrep`, `fgrep`, `cut`, `paste`, `join`.
4. Process Management System calls `fork()`, `exec()` and `wait()`.
5. a. Two-way Communication using Pipes.

- b. Process Communication using FIFOs.
6. Implement Shared Memory form of IPC.
7. Implement Message Queue form of IPC.
8. Implement Semaphore form of IPC to implement Producer Consumer Problem.
9. Simulate `cp`, `head` and `tail` commands.
10. Shell Script programs using Conditional and Iterative statements.
11. Write C programs to simulate the following memory management techniques
  - a. Paging
  - b. Segmentation
12. Program to implement FIFO and LRU Page replacement algorithms.
13. Program to implement FCFS and SSTF Disk Scheduling algorithm.
14. Program to implement Banker's algorithm for Deadlock avoidance.

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. GCC Compiler (Open source/ Freeware)

**Books and Materials**

**Text Books:**

1. Sumitabha Das. *Your Unix: The Ultimate Guide*, Tata McGraw-Hill, New Delhi, India.
2. T. Chan. *Unix System Programming using C++*, PHI, India, 1996.

**Reference Books:**

1. Randal K. Michael. *Mastering Unix Shell Scripting*, 2<sup>nd</sup> Edition, Wiley, India, 2008.

## A9006 – Computational Mathematics Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

This course provides hands-on experience in solving mathematical problems using computational tools. This course covers numerical methods and implementation using MATLAB or Python. The course helps to develop skills in algorithm development, data visualization, and scientific computing. In addition, the computational methods for real- world mathematical modeling can be applied.

#### Course Pre/Co-requisites

A9001 - Matrices and Calculus

A9002 - Ordinary Differential Equations and Vector Calculus

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9006.1. Develop the code to find the Eigen values and Eigen Vectors using Python/MATLAB
- A9006.2. Develop the code to find solution of Algebraic and Transcendental using Python/MATLAB
- A9006.3. Develop the code to find solution of Linear system of equations using Python/MATLAB
- A9006.4. Write the code to solve problems of First-Order linear differential equations with constant coefficients
- A9006.5. Write the code to solve problems of Higher order linear differential equations with constant coefficients

### Course Syllabus

#### List of Experiments:

Visualize all solutions graphically using programs.

1. Eigen values and Eigen Vectors
  - a. Finding real and complex Eigen values.
  - b. Finding Eigen vectors.
2. Solution of Algebraic and Transcendental Equations - Bisection method, Newton Raphson Method
  - a. Root of a given equation using Bisection method.
  - b. Root of a given equation using Newton Raphson Method.
3. Linear system of equations - Jacobi's iteration method and Gauss-Seidal iteration method
  - a. Solution of given system of linear equations using Jacobi's method.
  - b. Solution of given system of linear equations using Gauss-Seidal method.

4. First-Order ODEs - Exact and non-exact equations, Applications: exponential growth/decay, Newton's law of cooling
  - a. Solving exact and non-exact equations.
  - b. Solving exponential growth/decay and Newton's law of cooling problems.
5. Higher order linear differential equations with constant coefficients
  - a. Solving homogeneous ODEs.
  - b. Solving non-homogeneous ODEs.

### Books and Materials

#### Text Books:

1. Rajkumar Basal, Ashok Kumar Geo, and Manoj Kumar Sharma. *MATLAB and Its Applications in Engineering*. Pearson.
2. Kenneth A. Lambert. *The Fundamentals of Python: First Programs*. Cengage Learning, 2011.
3. Allen B. Downey. *Think Python*. 1<sup>st</sup> ed., O'Reilly Media.

#### Reference Books:

1. William Mitchell, Povel Solin, Martin Novak, et al. *Introduction to Python Programming*. NCLab Public Computing, 2012.
2. Jacob Fredslund. *Introduction to Python Programming*. 2007.
3. John C. Lusth. *An Introduction to Python*. University of Alabama, 2011.
4. Dave Kuhlman. *Introduction to Python*. 2008.

## A9603 - Full Stack Development

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

### Course Description

#### Course Overview

The Full Stack Development course introduces learners to the foundational technologies of web development. It covers HTML for structuring content, CSS for styling and layout, and JavaScript for adding interactivity. Students also learn to use JSON for data exchange between client and server. The course includes practical exposure to tools like VS Code, Git, and browser developer tools. By the end, learners will build a responsive web project, applying all the concepts and tools learned. This course is ideal for beginners aiming to develop modern, interactive websites.

#### Course Pre/Co-requisites

A9501 - Programming for Problem Solving

A9601 - Object Oriented Programming through Java

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

### Course Outcomes

After the completion of the course, the student will be able to:

- A9603.1. Apply the structure and semantics of HTML.
- A9603.2. Design and Style web pages using CSS for layout and design
- A9603.3. Develop interactive Client-side web pages with objects, events, error handling and form validation.
- A9603.4. Create dynamic web applications by using JSON for data analysis and establish database connection using JDBC.
- A9603.5. Build responsive full stack web applications integrating front-end, back-end, and database connectivity.

### Course Syllabus

#### Theory:

1. **HTML:** Introduction to HTML, Structuring a Basic Webpage with <!DOCTYPE>, <html>, <head>, and <body>. Common HTML Tags: div, h1, p, a, img, ul, ol, form, Lists, iFrame, Forms, Tables. Embedding Media: Images, Audio, and Video, Creating Links and Navigation: <a>, href, and anchors, Forms and Inputs: input, textarea, button, select.
2. **Introduction to CSS:** Types of Style sheets, CSS Selectors, CSS properties: Text, Background, Border, Margin, and Tables, HTML Media, HTML Graphics, Flexbox and Grid: Building Responsive Layouts, Responsive Design with Media Queries
3. **Introduction to JavaScript:** Introduction to JavaScript and Client-Side Scripting, Java Script Variables, Operators, Control Statements and Functions. Java Script Objects- Strings, Arrays, Date, Math, RegExp, Event handling, Java Script Error handling and Form Validations,

4. **JSON & JDBC:** What is JSON? (JavaScript Object Notation) ,JSON Syntax: Objects, Arrays, Keys, and Values, Parsing JSON with JSON.parse() and Converting Objects to JSON with JSON.stringify(),Working with JSON in JavaScript (fetching data, parsing, and dynamically rendering content).JDBC: Introduction to JDBC, Types of JDBC Drivers, Establishing Connection with Data Base, Statement, Prepared Statement and ResultSet.

**List of Experiments:**

1. Create a simple personal webpage using HTML.
  - a) Include: a heading, a paragraph, an image, and a link to an external website (e.g., a social media profile).
  - b) Add a form with a text field and a submit button.
  - c) Use semantic HTML tags such as <header>, <footer>, and <section>.
2. Create a registration form.
  - a) Include input fields for the user’s name, email, password, and a dropdown list for gender.
  - b) Use radio buttons and checkboxes to ask if the user agrees to terms and conditions.
  - c) Ensure all form fields are required.
  - d) Implement a submit button.
3. Style the personal webpage using CSS
  - a) Apply styles to text (fonts, colors, and sizes).
  - b) et up the layout with margins, padding, and borders.
  - c) Add a background color to the page.
4. Build a two-column layout using Flexbox,The left column should have some text content, and the right column should contain images,Experiment with justify-content and align-items for layout positioning,Create a responsive design that switches to a single column layout on smaller screens.
5. Add animations and transitions to the webpage.
  - a) Create a hover effect on buttons and links.
  - b) Animate a box or image moving across the screen when clicked (use @keyframes).
  - c) Experiment with smooth transitions on background colors or text changes when hovering over elements.
6. Write an HTML and CSS Program to create a simple web page with a header, Navigation Menu, content section and footer.Use media queries to make the web page responsive across different screen sizes(Desktop,Mobile and Tablet)
7. Write JavaScript program to perform arithmetic operations and string manipulations.
8. Write a JavaScript program to create array and perform different array operations using built in functions.
9. Use JavaScript to change HTML content, styles, and handle events like clicks and form submissions.
10. Create a Job Registration form and validate the fields name, email and contact number using appropriate regular expressions. If the form is valid user gets “Registered Successfully “, otherwise provide appropriate error message to user
11. Create a simple calculator using JavaScript that performs addition, subtraction, multiplication, and division based on user input. (Use functions, operators, and control statements).
12. Build a webpage with a button that changes the background color of the page when clicked. Use JavaScript event handling.(Use addEventListener() and document.body.style)
13. Create and parse JSON data. Display JSON content dynamically on a webpage using JavaScript.

14. Create a form that asks for name, email, and age. When the form is submitted, capture the data and convert it into a JSON string (Use FormData, then build a JavaScript object and JSON.stringify()).

**Laboratory Equipment/Software/Tools Required:**

1. A computer System with Ubuntu Operating System.
2. JDK (Open Source/Freeware).
3. Visual Studio Code Editor.

**Books and Materials**

**Text Books:**

1. Robson, Elisabeth, and Eric Freeman. Head First HTML and CSS. O'Reilly Media, 2023.
2. D' mello, Bruno Joseph, and Sai S. Sriparasa. JavaScript and JSON Essentials: Build Light-Weight, Scalable, and Faster Web Applications with the Power of JSON. 2nd ed., Packt Publishing, Apr. 2018

**Reference Books:**

1. Kogent Learning Solutions Inc. HTML 5 Black Book: Covers CSS 3, JavaScript, XML, XHTML, AJAX, PHP, and jQuery. 5th ed., DreamTech Press, 2016.
2. Niederst Robbins, Jennifer. Learning Web Design: A Beginner's Guide to HTML, CSS, JavaScript, and Web Images. 6th ed., O'Reilly Media, July 2025

## A9023 - Technology Entrepreneurship

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	0	45	45	1	40	60	100

### Course Description

#### Course Overview

This course enables students to transform refined product designs into viable entrepreneurial ventures or patentable innovations. Building on skills from previous courses in design thinking and product development, students will explore opportunity identification, intellectual property protection, market research, sustainable business models, funding strategies, and go-to-market planning. Emphasis is placed on aligning innovations with community needs while preparing for startup creation, patent filing, or both.

#### Course Pre/Co-requisites

A9022 - Product Design and Development

Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

SDG 17: Partnerships for the Goals

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9023.1. Identify and analyze market opportunities for community-driven technological innovations.
- A9023.2. Apply intellectual property strategies for protecting product designs and innovations.
- A9023.3. Develop sustainable and scalable business models for product commercialization.
- A9023.4. Formulate funding, financial, and go-to-market strategies for product launch.
- A9023.5. Prepare and deliver investor-ready pitches or patent documentation to relevant stakeholders.

#### Course Syllabus

##### Unit-I:

**Entrepreneurial Mindset and Opportunity Identification:** Understanding technology entrepreneurship in the community context. Startup ecosystem and innovation pathways. Market analysis and opportunity mapping for commercialization of Product.

##### Unit-II:

**Intellectual Property and Innovation Protection:** Overview of IP: patents, trademarks, copyrights, and trade secrets; patent search, drafting, filing, and grant procedures; leveraging IP for competitive advantage and innovation scaling.

##### Unit-III:

**Market Research and Business Model Development:** Defining target markets, customer segments, and value propositions. Competitive analysis and differentiation strategies. Business Model Canvas and Lean Startup principles.

**Unit-IV:**

**Funding, Financial Planning and Sustainability:** Study of funding options including grants, angel investors, venture capital, and crowd funding; budgeting, forecasting, and financial planning for startups; and integration of sustainability into long-term business growth strategies.

**Unit-V:**

**Go-to-Market Strategy, Pitching and Documentation:** Branding, marketing, and distribution planning; creating persuasive pitches for investors, partners, and stakeholders; preparing necessary documentation; final presentation of patent draft or startup business plan to an expert panel.

**Activity Plan**

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
1	Unit-I: Entrepreneurial Mindset	Understand technology entrepreneurship & startup ecosystem	Concept briefing + Open forum	Discussion: examples of community-based startups	Reflection note: “Why entrepreneurship matters for communities”	CO1
2	Unit-I: Opportunity Identification	Identify & map opportunities	Hands on session + Case analysis	Opportunity mapping using local problems	Opportunity mapping chart submission	CO1
3	Unit-II: IP Basics	Learn types of IP (patents, trademarks, copyrights)	Concept briefing + Example-driven discussion	Analyze famous patents & trademarks	Short report: “One innovation and its IP protection strategy”	CO2
4	Unit-II: Patent Process	Apply patent search & filing basics	Demo session + Hands-on exercise	Perform a mock patent search online (guided)	Draft simple patent claim for a product	CO2
5	Unit-III: Market Research	Define target market & customer segments	Concept briefing + Team activity	Build customer personas for chosen product idea	Submit customer persona & value proposition canvas	CO3
6	Unit-III: Business Model Development	Apply BMC & Lean Startup	Business modeling – Hands on session	Teams fill out Business Model Canvas	Submit BMC with initial differentiation strategy	CO3
7	Unit-IV: Funding Sources	Understand startup funding landscape	Concept briefing + Case discussion	Funding source comparison (VC, grants, crowdfunding)	Assignment: Funding strategy document for idea	CO4

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
8	Unit-IV: Financial Planning	Apply budgeting & forecasting	Hands on session	Build basic revenue/cost projection table	Submit 1-year financial projection	CO4
9	Unit-IV: Sustainability	Integrate sustainability in startups	Group reflection	Apply sustainability checklist to business model	Submit revised BMC integrating sustainability	CO4
10	Unit-V: Go-to-Market	Learn branding & marketing strategies	Hands on session + Peer feedback	Draft a marketing plan with target channels	Submit draft marketing & distribution strategy	CO4, CO5
11	Unit-V: Pitching Skills	Develop persuasive pitch	Startup pitch drill	Students deliver 3-min practice pitches with feedback	Submit pitch deck draft	CO5
12	Unit-V: Final Showcase	Present final startup plan/patent draft	Showcase + Expert review	Final presentations to panel (faculty/guests)	Final project submission: startup plan or patent draft	CO5

## Books and Materials

### Text Books:

1. Deependra Sharma. *Entrepreneurship in India*, Routledge, 2023.
2. Dr. S. Glory Swarupa & Ms. Swapna Vanamala. *Innovation, Incubation and Intellectual Property Rights*, 2023.

### Reference Books:

1. Neck, Heidi M., Patricia G. Greene, and Candida G. Brush. *Teaching Entrepreneurship: A Practice-Based Approach*, Edward Elgar Publishing, 2014.
2. Drucker, Peter F. *Innovation and Entrepreneurship: Practice and Principles*, reprint, Harper & Row, 1985.

**II B.Tech. II Semester**

### A9014 - Business Economics and Financial Analysis

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course introduces the fundamentals of Business Economics and Financial Analysis, covering business structures, economic concepts, demand and supply analysis, production and cost, market structures, and pricing. It also focuses on accounting principles, preparation of financial statements, ratio analysis, and capital budgeting methods to support effective financial decision-making.

##### Course Pre/Co-requisites

This course has no specific prerequisite and co-requisite.

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

SDG 17: Partnerships for the Goals

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9014.1. Analyze business and economic concepts to assess their impact on the overall economic environment.
- A9014.2. Examine the relationship between demand, supply, and elasticity in understanding market behavior.
- A9014.3. Apply production, cost, market structure, and pricing concepts to interpret business operations and competitive strategies.
- A9014.4. Apply accounting principles and rules for preparing financial statements.
- A9014.5. Analyze financial statements and capital budgeting techniques to evaluate the financial health of a business.

#### Course Syllabus

##### Unit-I:

**Introduction to Business and Economics:** Business-Structure of Business Firm, Types of Business Entities, Limited Liability Companies, Sources of Capital for company – Conventional and Non-Conventional. Economics-Significance of Economics, Micro and Macro Economic Concepts. Business Economics- Nature and Scope, Role of Business Economist. National Income-Concepts and Importance, Inflation and Money Supply. Business Cycle -Features and Phases.

##### Unit-II:

**Demand and Supply Analysis:** Demand-Function, Determinants and types. Law of Demand-Assumption and Exceptions. Elasticity of Demand- Types, Measurement and Significance of Elasticity of Demand, Factors affecting Elasticity of Demand. Demand Forecasting- Methods of Demand Forecasting. Supply Analysis-Functions, Determinants and Law of Supply.

**Unit-III:**

**Production, Cost, Market Structures & Pricing:** Production Analysis- Factors of Production, Production Function, Production Function with one variable input, two variable inputs, Returns to Scale. Cost analysis: Types of Costs, Short run and Long run Costs Break Even Analysis (simple problems). Market Structure: Nature of Competition, Features of Perfect competition, Monopoly, Oligopoly, Monopolistic Competition. Pricing-Types of Pricing, Product Life Cycle based Pricing,

**Unit-IV:**

**Financial Accounting:** Accounting concepts and Conventions, Accounting Equation, Double Entry system of Accounting, Rules for maintaining Books of Accounts, Journal, Posting to Ledger, Preparation of Trial Balance, Elements of Financial Statements, Preparation of Final Accounts (Simple Problems).

**Unit-V:**

**Ratios Analysis and Capital Budgeting:** Concept of Ratio Analysis, Importance and Types of Ratios- Liquidity Ratios, Turnover Ratios, Profitability Ratios, Proprietary Ratios, Solvency, Leverage Ratios- Analysis and Interpretation. Capital Budgeting – Capital, Types of capital, Capital Budgeting Methods (Simple Problems).

**Books and Materials**

**Text Books:**

1. D. Chaturvedi, S. L. Gupta. *Business Economics Theory and Applications* 4<sup>th</sup> ed., International Book House Pvt. Ltd. 2013.
2. Dhanesh K Khatri. *Financial Accounting*, 3<sup>rd</sup> ed., Tata Mc-Graw Hill, 2011.

**Reference Books:**

1. Geethika Ghosh, Piyali Gosh, Purba Roy Choudhury. *Managerial Economics*, 2<sup>nd</sup> ed., Tata Mc Graw Hill Education Pvt. Ltd. 2012.
2. A.R. Aryasri, *Managerial Economics and Financial Analysis*, 9<sup>th</sup> ed., TMH, India, 2011.
3. Geethika Ghosh, Piyali Gosh, Purba Roy Choudhury. *Managerial Economics*, 2<sup>nd</sup> ed., Tata Mc Graw Hill Education Pvt. Ltd. 2012.

### A9513 – Computer Networks

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course builds a solid understanding of computer networks and their working principles. It introduces how devices and systems connect and communicate using wired and wireless methods. Students learn how data is transmitted, verified, and corrected to maintain accuracy and reliability. The course covers techniques for sharing network resources and managing access among devices. It explains routing, addressing, and congestion control to ensure smooth data delivery. Learners study how networks are structured and standardized for global communication. Transport mechanisms and flow control are discussed to achieve reliable end-to-end communication. Common tools and services are introduced to show how applications work over networks. Key protocols for web, email, file transfer, and remote access are explored in detail. By completion, students can analyze, design, and troubleshoot modern networking systems effectively.

##### Course Pre/Co-requisites

A9505 – Computer Organization

A9507 – Operating Systems

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

SDG 11: Sustainable Cities and Communities

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9513.1. Demonstrate the reference models and physical transmission methods used to establish and support network communication.
- A9513.2. Select appropriate access control and error handling techniques to ensure reliable communication at the data link layer.
- A9513.3. Examine different routing and congestion control algorithms used to manage efficient packet transmission in networks.
- A9513.4. Employ transport layer protocols to establish and manage reliable end-to-end communication with efficient flow and congestion control.
- A9513.5. Implement an appropriate application layer protocol to enable effective user communication and data exchange over networks.

#### Course Syllabus

##### Unit-I:

**Introduction:** Network hardware, Network software, Reference models: OSI, TCP/IP, Connection oriented network and connectionless network. The Physical Layer: Guided transmission media, twisted pairs, coaxial cable, fiber optics, Wireless Transmission.

**Unit-II:**

**The Data Link Layer:** Design issues, error detection and correction, elementary data link protocols, sliding window protocols. The Medium Access Sub layer: Channel allocations problem, multiple access protocols: ALOHA, CSMA, Collision free protocols, Ethernet, Data Link Layer switching.

**Unit-III:**

**The Network Layer:** Network layer design issues, Routing Algorithms: Shortest path routing, flooding, distance vector routing, link state routing. Congestion control algorithms, the network layer in the internet: IPv4, Sub-netting, Super-netting, CIDR, NAT and IPv6.

**Unit-IV:**

**The Transport Layer:** Transport service, Transport layer protocols: UDP and TCP, Introduction, The TCP service model, The TCP protocol, The TCP Segment Header, TCP connection establishment, connection release, TCP sliding window, TCP Timer management, TCP Congestion control, and Performance issues.

**Unit-V:**

**The Application Layer:** Domain name system- DNS Name Space, Domain Resource Records, Name Servers. Application Layer Protocols: Simple Network Management Protocol (SNMP), Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), Simple Mail Transfer Protocol (SMTP), Telnet.4

**Books and Materials**

**Text Books:**

1. Tanenbaum, Andrew S., Nick Feamster, and David J. Wetherall *Computer Networks* , 6<sup>th</sup> ed., Pearson, 2024.
2. Sidhu, Bhavneet *An Integrated Approach to Computer Networks*, 1<sup>st</sup> ed., Khanna Publishing House, 2019.

**Reference Books:**

1. Stallings, William *Cryptography and Network Security: Principles and Practice*, 8<sup>th</sup> ed., Pearson, 2020.
2. Forouzan, Behrouz A. *Data Communications and Networking with TCP/IP Protocol Suite*, 6<sup>th</sup> reprint, McGraw Hill, 2022.

## A9702 – Machine Learning

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

### Course Description

#### Course Overview

This course will introduce the field of Machine Learning, in particular focusing on the core concepts of supervised and unsupervised learning. In supervised learning we will discuss algorithms which are trained on input data labelled with a desired output, for instance an image of a face and the name of the person whose face it is, and learn a function mapping from the input to the output. Unsupervised learning aims to discover latent structure in an input signal where no output labels are available, an example of which is grouping web- pages based on the topics they discuss. Students will learn the algorithms which underpin many popular Machine Learning techniques, as well as developing an understanding of the theoretical relationships between these algorithms.

#### Course Pre/Co-requisites

A9501 - Programming for Problem Solving

A9511 - Python Programming Laboratory

#### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

SDG 13: Climate Action

### Course Outcomes

After the completion of the course, the student will be able to:

- A9702.1. Identify the various concepts and challenges in machine Learning .
- A9702.2. Select modelling and evaluation technique for handling real time data.
- A9702.3. Use supervised and unsupervised learning algorithms for a given problem.
- A9702.4. Examine supervised and unsupervised learning algorithms for analysing data..
- A9702.5. Identify the various concepts of neural network to develop AI based applications.

### Course Syllabus

#### Unit-I:

**Introduction to Machine Learning :** Types of Machine Learning, Problems not to be solved using Machine Learning, Applications of Machine Learning, Tools in Machine Learning, Issues in Machine Learning, Machine learning Activities, Basic Types of Data in Machine Learning, Exploring Structure of data, Data Quality & Remediation, Data Pre-Processing.

#### Unit-II:

**Modelling and Evaluation :** Games, Introduction, Selecting a Model, Training a Model, Model Representation and Interpretability, Evaluating Performance of a Model, Improving performance of a Model, Feature subset selection, Dimensionality Reduction - PCA, SVD,FA, LDA. Agents,

**Unit-III:**

**Bayesian Concept Learning :** Introduction, Bayes' Theorem, Navie Bayes Classifier, Applications of Navie Bayes Classifier, Supervised Learning: Classification, Example of Supervised Learning, Classification Model Learning Steps, Common Classification Algorithms: KNN, Decision Tree, Random Forest model Support vector machines. Introduction of Regression: Example of Regression, linear Regression, Multiple linear Regression.

**Unit-IV:**

**Unsupervised Learning :** Introduction, Unsupervised vs Supervised Learning, Application of Unsupervised Learning, Clustering K-Means, K-Medoid, DBSCAN.

**Unit-V:**

**Basics of Neural Network :** Introduction, Understanding the Biological Neuron, Exploring the Artificial Neuron, Types of Activation Functions, Early Implementations of ANN, Architectures of Neural Network.

**Books and Materials**

**Text Books:**

1. Das, G. Amit Kumar, Saikat Dutt, and Subramanian Chandramouli. *Machine Learning.*, Pearson India Education Services, 2019.

**Reference Books:**

1. Tom M. Mitchel *Machine Learning* , McGraw Hill Education, 2013
2. Rudolph Russell. *Machine Learning: Step-by-Step Guide to Implement Machine Learning Algorithms with Python* , Addison-Wesley, 1992.
3. Luger, George F. *Artificial Intelligence: Structures and Strategies for Complex Problem Solving.*, 6<sup>th</sup> ed., Create Space Independent Publishing Platform, 2018.
4. Goel, Shivani. *Express Learning – Artificial Intelligence* , Pearson Education India, 2013.

### A9509 – Database Management System

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course introduces the core principles and techniques required in the design and implementation of database systems. This course focus on relational database management systems, including database design theory: E-R modeling, query languages like relational algebra, relational calculus and SQL. It also covers essential DBMS concepts such as: Normalization, Transaction Processing, Concurrency Control, Recovery, and tree based indexing techniques like ISAM, B+ trees etc which are required for designing an effective database. Students can undertake a semester project to design, build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS .

##### Course Pre/Co-requisites

A9506 – Discrete Mathematical Structures

A9601 – Object Oriented Programming

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 11: Sustainable Cities and Communities

SDG 16: Peace, Justice, and Strong Institutions

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9509.1. Design a database for a given problem using E-R diagrams and Relational Model.
- A9509.2. Make use of relational algebra and SQL to construct queries for solving case study-based database problems.
- A9509.3. Employ normalization techniques to organize database structures efficiently and eliminate data redundancy.
- A9509.4. Select appropriate transaction control techniques to maintain database consistency.
- A9509.5. Examine various concurrency control, recovery, and indexing techniques for improving performance.

#### Course Syllabus

##### Unit-I:

**Introduction and Data Base Design:** Introduction to DBMS, applications of DBMS, database systems versus file systems, view of data, Database users and administrators, database system structure. Database Design: Introduction to ER model, entities, attributes and entity sets, relationships and relationship sets, specialization, generalization, ER model sailor’s database. Logical database design: E-R to relational, Relational algebra operations. Introduction to Relational database model, SQL data types and database languages.

**Unit-II:**

**SQL Programming:** SQL basic operators, SQL set operators-union, intersect and except operators, Integrity constraints in SQL. Aggregate operators, GROUP BY, ORDER BY and HAVING Clause, Writing queries for sailor's database. Null values, views in SQL, nested queries, SQL joins-inner join, outer join, left outer join, right outer join, storing and retrieving images, storing and retrieving files, PL/SQL basics.

**Unit-III:**

**Schema Refinement and Normal Forms:** Introduction to schema refinement & Normalization, Decomposition and properties of decompositions, functional dependencies, Closure of Attributes set. Normal forms: 1NF, 2NF, 3NF, BCNF, 4NF,5NF. Problems on normalization, Schema refinement in database design.

**Unit-IV:**

**Transaction Management:** Transaction concept, transaction states, ACID properties, schedules-serial and non-serial schedules, Serializability-Conflict serializability, View serializability, recoverability and types of recoverability. Triggers, Cursors, SQL stored procedures.

**Unit-V:**

**Concurrency control, Recovery, and Indexing:** Concurrency control- lock based protocols, timestamp-based protocols, deadlocks handling. Recovery-ARIES recovery algorithm, Log based recovery. File organization techniques, Tree index structures: ISAM and B+ trees.

**Books and Materials**

**Text Books:**

1. Raghurama Krishnan, Johannes Gehrke. *Database Management Systems*, 3<sup>rd</sup> ed., Tata McGraw-Hill, 2014.
2. Abraham Silberschatz, Henry F. Korth, S. Sudarshan. *Database System Concepts*, 7<sup>th</sup> ed., McGraw- Hill, 2019.

**Reference Books:**

### A9516 – Design and Analysis of Algorithms

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
45	0	0	45	90	3	40	60	100

#### Course Description

##### Course Overview

This course will provide students with a strong foundation in developing efficient algorithmic solutions using strategies such as divide and conquer greedy methods, dynamic programming, backtracking, and branch and bound. It emphasizes both theoretical understanding and practical implementation, enabling students to analyse time and space complexities, solve real-world computational problems, and compare algorithmic approaches. The course also introduces advanced topics like NP-Hard and NP-Complete problems, equipping learners with the ability to identify computational boundaries and choose appropriate algorithmic techniques for various applications.

##### Course Pre/Co-requisites

A9501 – Programming for Problem Solving

A9503 – Data Structures

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9516.1. Demonstrate the asymptotic notations, divide and conquer techniques to decompose complex problems into small and simple problems.
- A9516.2. Utilize Greedy method to find out feasible solutions of problems..
- A9516.3. Examine complex engineering problems to identify optimal solutions through dynamic programming.
- A9516.4. Make use of backtracking and branching methods to solve the problems by verifying all possibilities of solutions.
- A9516.5. Inspect nondeterministic algorithms to solve polynomial and non-polynomial problems..

#### Course Syllabus

##### Unit-I:

**Introduction, Divide and Conquer:** Algorithm definition, Pseudo code Specifications, Performance Analysis-Space Complexity, Time Complexity, Recurrence relations: Substitution, recursion tree and master theorem, Asymptotic Notations-Big-Oh, Omega, and Theta. Divide And Conquer-General Method, Finding Maximum and Minimum, Merge Sort, Quick sort, Strassen’s Matrix Multiplication.

##### Unit-II:

**Disjoint Sets and Greedy Method:** Disjoint Set operations, Union and find algorithms. Greedy General Method, Real Knapsack Problem, Job sequencing with deadlines, Minimum-cost spanning trees- Prim’s Algorithm and Kruskal’s algorithm, Single source shortest Path.

**Unit-III:**

**Dynamic Programming:** General method, All pairs shortest path, Matrix Chain Multiplication, Optimal Binary search trees, 0/1 Knapsack, the travelling salesman problem, Reliability Design.

**Unit-IV:**

**Back Tracking:** The General Method, The n-Queens Problem, Sum of subsets, Graph coloring, Hamiltonian cycles, Knapsack Problem.

**Unit-V:**

**Branch and Bound, NP-Hard and NP Complete Problems:** General method, applications - Travelling sales person problem, 0/1 knapsack problem LC Branch and Bound solution, FIFO Branch and Bound solution. NP-Hard and NP-Complete Problems – Basic concepts, Non-deterministic algorithms, NP-Hard and NP Complete Classes.

**Books and Materials**

**Text Books:**

1. Horowitz, Ellis, Sartaj Sahni, and Sanguthevar Rajasekaran *Fundamentals of Computer Algorithms* , 2<sup>nd</sup> ed., Universities Press, New Delhi, 2008.
2. Cormen, Thomas H., Charles E. Leiserson, Ronald L. Rivest, and Clifford Stein. *Introduction to Algorithms* . , 4<sup>th</sup> ed., MIT Press, 2022.

### A9703 – Machine Learning Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

Machine Learning is concerned with computer programs that automatically improve their performance through experience. This course covers the practical algorithms for machine learning from a variety of perspectives. We cover topics such as PCA, ID3, Na ve Bayesian classifier, SVM classifier, KNN classifier, Bayesian network, linear and Multiple Regression algorithms, K-means and Agglomerative hierarchal Clustering algorithm..

##### Course Pre/Co-requisites

This course has no specific pre-requisites and co-requisites.

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 9: Industry, Innovation, and Infrastructure

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9703.1. Understand the implementation procedures for the machine learning algorithms.
- A9703.2. Design Python programs for various Learning algorithms
- A9703.3. Apply appropriate data sets to the Machine Learning algorithms.
- A9703.4. Identify and apply Machine Learning algorithms to solve real-world problems.
- A9703.5. Apply various pre-processing techniques on data sets.

#### Course Syllabus

##### List of Experiments :

1. Demonstrate the Data Pre-Processing techniques by taking real datasets.
2. Demonstrate Feature subset selection and implement dimensionality reduction (PCA) technique.
3. Write a program to demonstrate the working of the decision tree-based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
4. Write a program to demonstrate the working of the decision tree-based CART algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
5. Write a program to demonstrate the working of the decision tree-based C4.5 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
6. Write a program to implement the naive Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering a few test data sets.
7. Write a program to implement the SVM classifier for a sample training data set stored as a .CSV file.
8. Write a program to implement the K-NN classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier.

9. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using the standard Heart Disease Data Set.
10. Implement a linear Regression algorithm in order to t data points. Select the appropriate data set for your experiment and draw graphs.
11. Implement multiple linear Regression algorithms in order to t data points. Select the appropriate data set for your experiment and draw graphs
12. Write a program to implement the K-Means Clustering algorithm and find the SSE of set of cluster
13. Write a program to implement the DBSCAN Clustering algorithm and find the MSE of set of cluster
14. Write a program to implement an agglomerative hierarchal Clustering algorithm.
15. Write a program to illustrate all activation functions for Neural Network

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. Python (Open Source/ Freeware), Jupyter Notebook, Anaconda (Open Source/ Free- ware)

**Books and Materials**

**Text Books:**

### A9510 – Database Management System Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL			H	C	CIE
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

This practical course introduces the fundamental principles and techniques of database system design and implementation. It emphasizes relational database management systems (RDBMS) and covers key concepts like E-R modeling and SQL. Students will gain hands-on experience with SQL commands, including joins, aggregate functions, and nested queries. The course also introduces PL/SQL features such as triggers, cursors, procedures, and functions for advanced data handling. Learners will practice creating and querying databases effectively using structured programming techniques. Through case studies and exercises, students develop skills in writing efficient and optimized database queries. The course encourages analytical thinking through query formulation and problem-solving in real-world scenarios. Python integration with databases will also be introduced for data access and manipulation. Students will undertake a mini-project to design and implement a functional database system. By the end of the course, students will demonstrate competence in modeling, designing, and managing relational databases.

##### Course Pre/Co-requisites

A9501 - Programming for Problem Solving

A9503 - Data Structures

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 8: Decent Work and Economic Growth

SDG 11: Sustainable Cities and Communities

SDG 16: Peace, Justice, and Strong Institutions

##### Course Outcomes

After the completion of the course, the student will be able to:

- A9510.1. Develop a database by creating E-R diagrams and transforming them into a relational model for a given problem.
- A9510.2. Formulate and execute SQL queries to retrieve, modify, and manage data for a given case study.
- A9510.3. Utilize PL/SQL programming constructs, cursors and triggers to interact with databases effectively.
- A9510.4 Implement stored procedures and functions in PL/SQL to develop reusable solutions for database problems.
- A9510.5 Build applications that interact with relational databases to handle real-time data operations.

##### Course Syllabus

###### List of Experiments:

1. a. Practice on SQL data definition language (DDL) commands and data manipulation language (DML) commands to retrieve and modify data.  
b. Practice on SQL DCL and TCL commands.
2. a. Case Study on designing ER diagrams for university database.  
b. Case Study on designing ER diagrams for company database to store information about employees.

3. Practice on different types of SQL operators and aggregate operations.
4.
  - a. Practice on queries using GROUP BY, ORDER BY, and HAVING clauses.
  - b. Practice on queries involving different types of joins.
5.
  - a. Case Study on sailors database queries.
  - b. Case Study on employee database queries.
6. Practice on different types of SQL built-in functions like date functions, string functions, numeric and conversion functions, analytic functions, storing and retrieving images, files.
7. Practice on queries using co-related sub-queries and nested queries.
8. Practice on PL/SQL basics for writing programs using programming constructs like variables, operators, conditional and control statements.
9. Practice on PL/SQL programs using cursors.
10. Practice on PL/SQL programs using triggers.
11. Practice on PL/SQL programs using stored procedures.
12. Practice on PL/SQL programs using functions.
13. Practice on performing basic database operations by connecting to database using Python.
14. Case Study in developing a database following all steps in the design of databases elaborating normalization and de-normalization.

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. MySql (Open Source/ Freeware)
3. Python and Python IDE (Open Source/ Freeware)

**Books and Materials**

**Text Books:**

1. Raghurama Krishnan, Johannes Gehrke. *Database Management Systems*, 3<sup>rd</sup> Edition, Tata McGraw-Hill, New Delhi, India, 2014.
2. Abraham Silberschatz, Henry F. Korth, S. Sudarshan. *Database System Concepts*, 7<sup>th</sup> Edition, McGraw-Hill, New Delhi, India, 2019.

**Reference Books:**

1. Elmasri Navate. *Fundamentals of Database Systems*, 7<sup>th</sup> Edition, Pearson Education, India, 2016.

### A9704 – IoT and Drones Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL			H	C	CIE
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

The purpose of the course is to make Understand the importance of IoT and Robotics to students and also to get to know the current components of typical IoT devices and trends for the future. IoT design considerations, constraints and interfacing between the physical world and devices will be covered in this course. The key components of networking are also covered to ensure students to connect their devices to the Internet.

##### Course Pre/Co-requisites

A9204 - Basic Electrical Engineering

A9511 - Python Programming Laboratory

##### Relevant Sustainable Development Goals (SDGs)

SDG 9: Industry, Innovation, and Infrastructure

SDG 11: Sustainable Cities and Communities

SDG 13: Climate Action

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9704.1. Identify the characteristics, design and communication models of IoT.
- A9704.2. Identify the various domain specific applications of IoT.
- A9704.3. Describe IoT applications using Raspberry Pi interface.
- A9704.4. Identify the characteristics, design and communication models of Drones.
- A9704.5. Design and add payloads of Drone.

#### Course Syllabus

##### List of Experiments:

1. Write a Program using Arduino IDE to blink and 5V LED light.
2. Write a Program using Arduino IDE to create traffic light system with three LEDs (Red, Orange and Green).
3. Write a Program using Arduino IDE to sense the temperature of the room using DHT11 Sensor.
4. Write a Program using Arduino IDE to create automatic street lighting system using LDR Light Sensor
5. Write a Program using Arduino IDE to measure the distance using Ultrasonic sensor.
6. Measure the moisture level in soil using soil moisture sensor.
7. Implement yield monitoring in Agriculture.
8. Installing Ubuntu 19+ OS on the Raspberry Pi 4+ device and explore the features.
9. Implement Raspberry Pi program for Distance Measurement Using Ultrasonic Sensor and displaying on LCD.
10. Connect a single BLDC drone motor with LIPO battery using Electric Speed Controller (EDC) and XT60 connector.

11. Write a program to control all the 4 BLDC motors using Arduino.
12. Using 433Mhz Tx and Rx, design a plastic motors based Remote Control car using ESP8266 Module.
13. Construct drone using Kk2.1 light control board.
14. Measure the temperature of the drone using DHT11 sensor in Raspberry Pi microcontroller.
15. Write a Raspberry Pi program to measure the battery level (remaining battery level) of the Li-ion battery connected to the BDLC motor sand alert the user if the battery is less than 30.

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems (PCs) installed with Ubuntu OS (Open source/ Freeware)
2. Python (Open Source/ Freeware), Jupyter Notebook, Anaconda (Open Source/ Free- ware)
3. Arduino IDE(open source/ Freeware),Mission Planner(open source/ Freeware)
4. Multimeter, Electric Soldering Kit
5. Breadboards, Raspberry PI 4 -2GB RAM , Type C org power supply from pifounda- tion,HDMI TO VGA CONVERTER,16GB CALSS 10 MEMORY CARD, Node MCU (ESP8266).
6. Jumper wires (Male-Male, Male-Female, Female-Female) 120 Pieces (20 cm)
7. Resisters pack
8. DHT11 (Digital Humidity and Temperature)sensor
9. LDR (Light Dependent Resistors) Sensor
10. LCD display
11. Ultrasonic Range Finder Module Sensor, IR Sensor, Gas Sensor, Soil Moisture Sensor, Arduino Mega
12. USB cables for Node MCU
13. Red LED Lights , Green LED Lights , Yellow LED
14. BLDC motors, Drone Frames, KK2.1 Flight Control Board, Lights

### A9514 – Computer Networks Laboratory

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL			H	C	CIE
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

This networking lab provides practical exposure to building and analyzing computer networks. It begins with connecting systems in a local network and implementing framing techniques like bit and character stuffing. Students practice error detection using CRC and flow control with sliding window and Go-Back-N protocols. Routing is explored through distance vector algorithms to generate routing tables. Security concepts are introduced with encryption and decryption techniques. Traffic management and congestion control are covered using leaky bucket and frame sorting methods. NS2 simulations include designing topologies, TCP/UDP communication, wireless networks, and performance analysis. The lab concludes with network design using loop constraints and Packet Tracer for real-world scenarios.

##### Course Pre/Co-requisites

A9501 – Programming for Problem Solving

A9502 – Programming for Problem Solving Laboratory

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 9: Industry, Innovation, and Infrastructure

SDG 11: Sustainable Cities and Communities

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9514.1. Apply framing, error detection, and flow control techniques to ensure reliable data transmission across networks.
- A9514.2. Implement routing algorithms and congestion control mechanisms for managing network traffic.
- A9514.3. Choose an appropriate cryptographic algorithm to develop secure network applications.
- A9514.4. Use simulation tools like NS2 and Packet Tracer to design, analyse, and optimize wired and wireless network topologies.
- A9514.5. Develop client-server communication and protocol-based solutions (TCP/UDP) to model and evaluate real-world networking scenarios.

#### Course Syllabus

##### List of Experiments:

1. Connect Computers in Local Area Network.
2. Implement:
  - a. Bit-Stuffing
  - b. Character Stuffing
3. Implement CRC and Error handling techniques
4. Implement Sliding-Window protocols
5. Implement distance vector routing algorithm for obtaining routing tables at each node

6. Develop a simple data link layer that performs the flow control using the sliding window protocol, and loss recovery using the Go-Back-N mechanism
7. Implement data encryption and data decryption
8. Write a program for:
  - a. congestion control using Leaky bucket algorithm
  - b. frame sorting techniques used in buffers
9. Design client-server model using NS2
10. Design a sample topology using NS2
11. Implement Transmission Control Protocol (TCP) and User Datagram Protocol (UDP) between pair of systems using NS2.
12. Design wireless network using NS2
  - i. Simulate to Find the Number of Packets Dropped
  - ii. Simulate to Find the Number of Packets Dropped by TCP/UDP
  - iii. Simulate to Find the Number of Packets Dropped due to Congestion
  - iv. Simulate to Compare Data Rate & Throughput
  - v. Simulate to Plot Congestion for Different Source/Destination
  - vi. Simulate to Determine the Performance with respect to Transmission of Packets
13. Design a network using loop constraint
14. Design a Network using Packet Tracer

**Laboratory Equipment/Software/Tools Required:**

1. A computer Systems installed with Ubuntu perating System (Open Source/Freeware).
2. NS2 (Open Source/Freeware).
3. Packet Tracer.

**Books and Materials**

**Text Books:**

1. Tanenbaum, Andrew S., Nick Feamster, and David J. Wetherall. *Computer Networks*, 6<sup>th</sup> ed., Pearson, 2024.
2. Sidhu, Bhavneet. *An Integrated Approach to Computer Networks*, 1<sup>st</sup> ed, Khanna Publishing House, 2019.

**Reference Books:**

1. Forouzan, Behrouz A. *Data Communications and Networking with TCP/IP Protocol Suite*, 6<sup>th</sup> ed., McGraw-Hill, 2022.
2. Nayak, Ajit Kumar, Satyananda Champati Rai, and Rajib Mall *Computer Network Simulation Using NS2.*, 1<sup>st</sup> ed., CRC Press, 2016.

### A9517 – User Experience Design

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	30	0	30	1	40	60	100

#### Course Description

##### Course Overview

This course introduces Flutter as a modern cross-platform development framework and guides learners through the foundations needed to build applications. It begins with an orientation to the framework, its architecture, and how widgets function at the heart of Flutter applications. Learners will explore the distinction between stateless and stateful components and how they interact within widget and element trees. The setup process for different operating systems is covered step by step, ensuring a smooth environment configuration. Once the tools are ready, learners quickly progress into building a simple app and experiencing the rapid development cycle with hot reload. The course also emphasizes the importance of themes and styling for creating visually consistent applications. Fundamentals of the Dart programming language are introduced to strengthen coding skills and enable smooth integration with Flutter. Students learn best practices for structuring projects, organizing code, and refactoring for maintainability. A wide variety of common UI components and input controls are demonstrated to build interactive interfaces. Finally, the course explores animations and dynamic behaviors, enabling learners to design engaging and responsive user experiences.

##### Course Pre/Co-requisites

A9601 - Object Oriented Programming

A9604 - Web Application Engineering

##### Relevant SDG(s)

SDG 4 – Quality Education

SDG 8 - Decent Work and Economic Growth

SDG 11 - Sustainable Cities and Communities

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9517.1. Setup Flutter SDK and project configuration skills to build and verify cross-platform mobile applications.
- A9517.2. Implement Flutter UI components, themes, and navigation techniques to create functional and interactive mobile interfaces.
- A9517.3. Develop Dart programs using various programming constructs to solve real time problems.
- A9517.4. Design animation, form validation, and external package integration in Flutter applications to enhance application usability and performance.
- A9517.5 Organize Flutter widget trees, applying modular programming techniques to build maintainable and reusable application components.

#### Course Syllabus

##### Theory:

1. **Introducing Flutter and Getting Started:** Introducing Flutter, Defining Widgets and Elements, Understanding Widget Lifecycle Events, The Stateless Widget Lifecycle, The Stateful Widget Lifecycle,

Understanding the Widget Tree and the Element Tree, Stateless Widget and Element Trees, Stateful Widget and Element Trees. Installing the Flutter SDK: Installing on macOS (System Requirements, Get the Flutter SDK, Check for Dependencies, iOS Setup: Install Xcode), Android Setup (Install Android Studio, Set Up the Android Emulator), Installing on Windows (System Requirements, Get the Flutter SDK, Check for Dependencies, Install Android Studio, Set Up the Android Emulator), Installing on Linux (System Requirements, Get the Flutter SDK, Check for Dependencies, Install Android Studio, Set Up the Android Emulator), Configuring the Android Studio Editor.

Creating a Hello World App: Setting Up the Project, Using Hot Reload, Using Themes to Style Your App, Using a Global App Theme, Using a Theme for Part of an App, Understanding Stateless and Stateful Widgets, Using External Packages, Searching for Packages, Using Packages.

2. **Learning Dart Basics:** Use of Dart, Commenting Code, Running the `main()` Entry Point, Referencing Variables, Declaring Variables, Numbers, Strings, Booleans, Lists, Maps, Runes. Using Operators, Flow Statements (if and else, ternary operator, for loops, while and do-while, while and break, continue, switch and case). Using Functions, Import Packages, Using Classes, Class Inheritance, Class Mixins, Implementing Asynchronous Programming.
3. **Creating a Starter Project Template:** Creating and Organizing Folders and Files, Structuring Widgets, Understanding the Widget Tree, Introduction to Widgets, Building the Full Widget Tree, Building a Shallow Widget Tree, Refactoring with a Constant, Refactoring with a Method, Refactoring with a Widget Class.
4. **Using Common Widgets and Animations:** Using Basic Widgets: Safe Area, Container, Text, Rich Text, Column, Row, Column and Row Nesting. Buttons: Floating Action Button, Flat Button, Raised Button, Icon Button, Popup Menu Button, Button Bar. Using Images and Icons: Asset Bundle, Image, Icon. Using Decorators. Using the Form Widget to Validate Text Fields, Checking Orientation. Adding Animation to an App: Using Animated Container, Using Animated Cross Fade, Using Animated Opacity, Using Animation Controller, Using Staggered Animations.

#### List of Experiments:

1. Write a program to install and configure Flutter SDK and verify the setup using `flutter doctor`.
2. Write a program to create a new Flutter project and explore its folder structure.
3. Write a program to display "Hello World" using a `StatelessWidget` and demonstrate Hot Reload.
4. Write a program to implement global and local themes in a Flutter application.
5. Write a program to add an external package (e.g., `http`) and display fetched data.
6. Write a program in Dart to demonstrate variables, data types, and operators.
7. Write a program in Dart to implement control statements (if-else, for, while, switch) and functions.
8. Write a program in Dart to demonstrate classes, objects, and inheritance.
9. Write a program in Dart to implement asynchronous programming using `async`, `await`, and `Future`.
10. Write a program to create a structured widget tree and refactor it using methods and widget classes.
11. Write a program to demonstrate the use of basic widgets such as `Container`, `Row`, `Column`, `Text`, `Image`, and `Icon`.
12. Write a program to create a login form using `Form` and `TextFormField` with validation.
13. Write a program to implement navigation between two screens using different buttons.

14. Write a program to add animations using `AnimatedContainer`, `AnimatedOpacity`, and staggered animations.

**Laboratory Equipment/Software/Tools Required:**

1. Computer Systems installed with Ubuntu Operating System (Open Source/Freeware).
2. Flutter SDK, Dart SDK (bundled with Flutter), and Android Studio (latest version) with:Flutter plugin, Dart plugin (Open Source/Freeware).
3. Android Emulator setup, Xcode, Visual Studio Code (Open Source/Freeware).

### A9024 – Community Driven Product Evaluation

Teaching and Learning Scheme				Hours	Credits	Assessment Marks		
CI		LI	TW+SL	H	C	CIE	SEE	Total
L	T	P	SL					
0	0	0	45	45	1	40	60	100

#### Course Description

##### Course Overview

This course provides mathematical knowledge required to analyze problems encountered in engineering. In this course, the students are acquainted with ordinary differential equations of first and higher order and Laplace transforms, vector calculus. In addition, this course can be applied in many areas of engineering such as wireless communication, signal processing, robotics and animation.

##### Course Pre/Co-requisites

A9023 - Technology Entrepreneurship

##### Relevant Sustainable Development Goals (SDGs)

SDG 4: Quality Education

SDG 11: Sustainable Cities and Communities

SDG 12: Responsible Consumption and Production

SDG 17: Partnerships for the Goals

#### Course Outcomes

After the completion of the course, the student will be able to:

- A9024.1. Apply structured evaluation frameworks to assess technical, functional, and social impact of products.
- A9024.2. Conduct community-centered product testing and collect actionable feedback.
- A9024.3. Benchmark products against industry standards and competitor solutions.
- A9024.4. Analyze evaluation data to identify strengths, weaknesses, and areas for improvement.
- A9024.5. Integrate knowledge from all prior courses to produce a comprehensive commercialization or patent readiness report.

#### Course Syllabus

##### Unit-I:

**Product Evaluation Fundamentals:** Purpose, scope, and importance of product evaluation in community contexts. Key Performance Indicators (KPIs), usability, and sustainability metrics. Ethical considerations in testing with communities.

##### Unit-II:

**Standards, Compliance and Benchmarking:** Relevant industry, safety, and environmental standards. Social impact and sustainability assessment frameworks. Competitive benchmarking and market gap analysis.

##### Unit-III:

**Community Centered Testing and Data Collection:** Designing and executing real-world product trials. Feedback mechanisms: surveys, interviews, observation, analytics. Collecting and categorizing qualitative and quantitative data.

**Unit-IV:**

**Data Analysis and Product Improvement Planning:** Analytical tools for interpreting evaluation results. Identifying design gaps and improvement opportunities. Translating insights into actionable product enhancement plans.

**Unit-V:**

**Integrated Product Documentation:** Consolidating insights from design thinking, product development, entrepreneurship, and evaluation. preparing a comprehensive commercialization or patent readiness dossier. and presenting outcomes to a review panel for validation and approval.

**Activity Plan**

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
1	Unit-I: Evaluation Fundamentals	Understand purpose, scope & importance of product evaluation	Concept briefing	Discussion: “Why evaluation is crucial for community-driven products”	Reflection note on role of evaluation in product lifecycle	CO1
2	Unit-I: KPIs & Metrics	Learn KPIs, usability & sustainability measures	Concept briefing + Case examples	Teams define KPIs for a sample product	Submit KPI framework for selected case	CO1
3	Unit-I: Ethics in Evaluation	Apply ethical considerations in testing	Problem-based learning + Collaborative exchange	Debate: “Ethics vs. Innovation speed in testing”	Short essay on ethical challenge in testing	CO1
4	Unit-II: Standards & Compliance	Learn relevant industry & safety standards	Demo session + Case study	Review product compliance requirements from standards body	Submit compliance checklist for a product	CO2, CO3
5	Unit-II: Benchmarking	Apply benchmarking frameworks	Hands-on session + Benchmarking activity	Benchmark 2 community products against market leaders	Submit benchmarking chart	CO3
6	Unit-II: Market Gap Analysis	Identify market gaps & opportunities	Hands-on session	Teams map competitor strengths vs weaknesses	Submit market gap report	CO3
7	Unit-III: Community-Centered Testing	Design product trials with stakeholders	Hands-on workshop + Role-play	Simulate community feedback session	Submit trial design protocol	CO2

Week	Unit	Objective	Teaching Method	In-Class Activities	Assignments / Assessments	CO Mapping
8	Unit-III: Feedback Mechanisms	Practice data collection methods	Practical session + Peer feedback	Run mock survey/interview for a prototype	Submit collected sample data	CO2
9	Unit-IV: Data Analysis Tools	Analyze evaluation data	Analytical lab + Software demo	Use basic data tools (Excel/SPSS/PowerBI) to interpret results	Submit initial analysis report	CO4
10	Unit-IV: Product Improvement	Translate insights into action	Product improvement exercise	Teams identify weaknesses & propose enhancements	Submit product improvement plan	CO4
11	Unit-V: Integrated Documentation	Consolidate learnings from all prior courses	Documentation	Draft commercialization or patent dossier	Submit draft dossier	CO5
12	Unit-V: Final Showcase	Present integrated evaluation outcomes	Showcase + Expert panel review	Final presentations with reports, feedback loop	Submit final commercialization/patent readiness dossier	CO5

## Books and Materials

### Text Books:

1. Deependra Sharma *Entrepreneurship in India*, Routledge, 2023.
